Writing a scientific article in English is often a major challenge for non-native speakers of the language. They not only need to produce a well-structured and coherent text, but they are also expected to use correct and idiomatic English throughout. While many books and guides deal with academic writing in general, few focus specifically on writing a scientific article, and most are not written with non-native speakers of English in mind. This guide now offers help. It provides comprehensive and practical advice for non-English graduate students (Master's and PhD) and researchers from various disciplines who wish to communicate their work effectively. It presents all the essential elements for writing a successful scientific paper: (1) getting started and structuring your thoughts; (2) structuring your paper; (3) citing sources; (4) writing well-structured and coherent paragraphs; (5) constructing effective sentences; (6) considering information placement and word order; (7) adopting the right style and using appropriate vocabulary; (8) avoiding the pitfalls of English grammar; (9) using correct spelling and punctuation. This guide is the culmination of Taalcentrum-VU's years of experience in providing clear language and communication consulting in combination with practical tools to aid the aspiring writer of scientific English.

Ptolemy's Almagest is one of the most influential scientific works in history. A masterpiece of technical exposition, it was the basic textbook of astronomy for more than a thousand years, and still is the main source for our knowledge of ancient astronomy. This translation, based on the standard Greek text of Heiberg, makes the work accessible to English readers in an intelligible and reliable form. It contains numerous corrections derived from medieval Arabic translations and extensive footnotes that take account of the great progress in understanding the work made in this century, due to the discovery of Babylonian records and other researches. It is designed to stand by itself as an interpretation of the original, but it will also be useful as an aid to reading the Greek text.

In the twenty-first century, the widespread integration of computer technologies has brought text-based information into many facets of everyday life. This has caused an ever-growing interest in typography across many fields of visual communication, where text and letterform play a central role in disseminating social trends and reflecting the spirit of the times. Arabic Typography takes the reader through a comprehensive study of Arabic letterforms, starting with a concise historical overview of their development and styles, and proceeding to the latest design and technological advances. It attempts to establish the foundations for Arabic type-design by drawing lessons from past practices and aesthetic conventions, in order to retain the enduring traits that are of relevance for improvement and innovation in future type-design creations. Going beyond the historical facts to discuss current design issues pertaining to the creation and production of letterforms, it presents Arabic typographic design as an essential communication tool that should marry functionality and legibility to aesthetic delight. This book will serve as a valuable reference on Arabic typography, and as an educational guide for design students, professionals and anyone who uses Arabic type and enjoys the visual appearance of this language and its letterforms.

For thirty years, Karen Davis has been advocating for, writing about, and studying the world of chickens and other domesticated fowl. As the founder and director of United Poultry Concerns, Davis has done more than perhaps anyone to reveal the complex and socially rich lives of birds. Her writing--intellectually rigorous, passionate, erudite, and witty--brings fully to the fore the great injustices we have perpetrated on these intelligent and loving creatures. For the Birds showcases Davis's three decades of popular and academic work. She tells the story of how she became an advocate and the many individual birds she has known and whose lives and deaths have deepened her commitment to seeking their freedom from suffering. Stirring, provocative, and brilliantly written, For the Birds illuminates one woman's enduring quest to change our perceptions of those animals we routinely confine, abuse, and kill by the billions.

This cutting-edge collection of articles provides the first organised reflection on the language of films and television series across British, American and Italian cultures. The volume suggests new directions for research and applications, and offers a variety of methodologies and perspectives on the complexities of "telecinematic" discourse — a hitherto virtually unexplored area of investigation in linguistics. The papers share a common vision of the big and small screen: the belief that the discourses of film and television offer a re-presentation of our world. As such, telecinematic texts reorganise and recreate language (together with time and space) in their own way and with respect to specific socio-

cultural conventions and media logic. The volume provides a multifaceted, yet coherent insight into the diegetic — as it revolves around narrative — as opposed to mimetic — as referring to other non-narrative and non-fictional genres — discourses of fictional media. The collection will be of interest to researchers, tutors and students in pragmatics, stylistics, discourse analysis, corpus linguistics, communication studies and related fields.
