Following in the tracks of the author ' s well-known Alfa DOHC tuning manual, Jim Kartalamakis describes all kinds of useful information and techniques to increase power, performance and reliability of V6 Alfas and their engines. This book is the result of much research and firsthand experience gained through many projects concerning Alfa V6 rear-wheel drive models, from the GTV6

series to the last of the 75 3.0 models. A wealth of completely new information can be found here regarding cylinder head mods, big brake mods, LSD adjustment procedure, suspension modifications for road and track, electrical system improvements, flowbench diagrams, dyno plots, and much more!

Autocar & Motor Springer Science & Business Media

This book covers the background, conception, design, production and aftermath of the iconic Ferrari 288 GTO, including the prototypes, the early production cars, the mainstream production cars in their various specification guises, and the Evolution cars planned for the aborted

Group B FIA race series. A comprehensive and beautifully illustrated look at a unique sports car.

Alfa Romeo Production Cars from 1910 Random House Digital, Inc.

Here is a fact and picture-packed book dedicated solely to the Giulia GT in all its forms including the fabulous lightweight GTA racer. Now an updated, large format third edition which includes over 100 new images.

The Bulletin David and Charles

The Lotus Elite was a turning point for Lotus. First produced at the end of the 1950s, it marked Lotus' transition from a maker of small racing cars, which had limited utility on the road, to the producer of a highly sophisticated road and race car.

In the Elite, Lotus exploited its knowledge of new technology and racing pedigree to produce a car which, with its glass fibre monocoque and Coventry Climax engine, had the potential to be a world beater. This book gives an insight into the reasons the car was produced and its importance in Lotus' history, especially in the production of lightweight innovative cars. Through interviews with Elite owners, first hand accounts provide a good overview of owning one of these iconic cars, covering its foibles and quirks as well as its exemplary roadholding, handling and performance. Illustrated with many colour photographs, along with period advertising material, the book provides a valuable insight into owning, running and racing these iconic

cars.

Autocar David and Charles

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including

autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE

standards.

Alfa Romeo Owners Bible David and Charles

Head gasket repairs, valve adjustments, camshaft timing, carb and SPICA fuel injection tuning, and driveshaft donut replacement are all explained. Experienced, hands-on guidance that'll keep you in the drivers seat.
