DESCRIPTION
The ALGEBRA 1 SINGLE VARIABLE LINEAR EQUATIONS WORKBOOK is a resource that students can use to practice applying the properties, concepts, and computational

techniques that are used to solve one-step, two-step, three-step, and multiple-step single variable linear equations. This workbook contains examples of step-by-step solutions for these types of equations as reference for students. This workbook also contains a review of the Commutative Properties of Addition and Multiplication, Associative Properties of Addition and Multiplication, the Additive Inverse Property, the Multiplicative

Inverse Property, the Subtraction Property, the Identity Properties of Addition and Multiplication, and the Distributive Property of Multiplication.

Additionally, this workbook provides examples of equations that are conditional, an identity, and a contradiction.

There are step-by-step solutions for every problem in this workbook.

This enables students to verify their work and solutions, and correct any mistakes. If students adhere to this process

diligently, they should develop confidence in their abilities to solve the types of single variable linear equations. **HOW TO USE THIS WORKBOOK** As

students work their way through the different types of equations in this workbook, they may find some of the equations a bit of a challenge to solve. This is intentional so students get practice in solving various complex problems. If they get stuck on a problem, they can take a quick look at the solutions for the next step in

how to proceed.

Then, they should go back to the problem and keep working on it until it's finished.

Afterwards, they should check their work and answer.

If students can do the majority of these challenging problems correctly on their own, they can feel a sense of accomplishment knowing that they solved difficult problems. Note:

These problems will definitely improve their computational skills if they minimize their use of calculators.

APPLICATION PROBLEMS This

workbook contains a total of 147 problems. The last 37 problems are word problems; twelve which ask students to find a number under a given set of conditions. Some problems are percentage problems and distance problems. There is a pair of word problems where students are asked to convert temperature given in degrees Celsius to degrees Fahrenheit, and vice versa. There are other word problems where students have to determine how to use the

information in the problem to substitute for one or multiple variables to reduce the equation to a single variable linear equation.

ABOUT THE AUTHOR

Norman Balason is a high school math teacher. He is in his 27th year of teaching high school math classes. During his teaching career he has taught Pre-Algebra, Algebra 1, Geometry, Algebra 2, and Pre-Calculus. Norman earned his B.A. in Mathematics from the University of Hawaii at Manoa, and a M.Ed. from

Chaminade University of Honolulu. Norman is a Navy Veteran. He enlisted in the United States Navy upon graduating from high school. He worked 12-on, 12-off shifts seven days a week as an F-14 Tomcat plane captain (not a pilot) for the VF-41 Black Aces while they were out at sea on the great aircraft carrier U.S.S. Nimitz. He is proud to have served his country while traveling the world and developed life-long friendships

through unforgettable experiences. Norman has Algebra 1 and Algebra 2 worksheets that are available on the Teachers Pay Teachers website at <https://www.teacherspayteachers.com/Store/Ncbeez-Math-Class>. for 9th Grade High School Algebra One Globe Fearon This text—based on the author's popular courses at Pomona College—provides a readable, student-friendly, and somewhat sophisticated introduction to abstract algebra. It is aimed at sophomore or junior undergraduates who are seeing the material for the first time. In addition to the usual definitions and theorems, there is ample discussion to help students build intuition and learn how to think about the abstract concepts. The book has over 1300 exercises and mini-projects of varying

degrees of difficulty, and, to facilitate active learning and self-study, hints and short answers for many of the problems are provided. There are full solutions to over 100 problems in order to augment the text and to model the writing of solutions. Lattice diagrams are used throughout to visually demonstrate results and proof techniques. The book covers groups, rings, and fields. In group theory, group actions are the unifying theme and are introduced early. Ring theory is motivated by what is needed for solving Diophantine equations, and, in field theory, Galois

theory and the solvability of polynomials take center stage. In each area, the text goes deep enough to demonstrate the power of abstract thinking and to convince the reader that the subject is full of unexpected results.
