Physics is equally appropriate
for average and gifted students.

The entire program is based on
introducing a topic to a student
and then allowing them to build
upon that concept as they learn
new ones. Topics are gradually
increased in complexity and
practiced every day, providing
the time required for concepts
to become totally familiar.

Saxon math programs produce
confident students who are not
only able to correctly compute,

but also to apply concepts to new
situations. These materials gently
develop concepts, and the practice
of those concepts is extended over
a considerable period of time. This
is called "incremental development
and continual review." Material is
introduced in easily
understandable pieces
(increments), allowing students to
grasp one facet of a concept before
the next one is introduced. Both
facets are then practiced together
until another one is introduced.
This feature is combined with
continual review in every lesson
throughout the year. Topics are
never dropped but are increased in
complexity and practiced every
day, providing the time required
for concepts to become totally
familiar. Algebra 1, third edition is
made up of five instructional
components: Introduction of the
New Increment, Examples with
Complete Solutions, Practice of the
Increment, Daily Problem Set, and
Cumulative Tests. Algebra 1 covers
topics typically treated in a first-
year algebra course. This set
contains a student text, answer key,
and test forms. A solutions manual
is available separately. Grade 9.

Eureka helps students to truly understand math, connect it to the real world, and prepare them to

solve problems they haven't encountered before. The team of teachers and mathematicians who created Eureka Math believe that it is not enough for students to know the process for solving a problem; they need to know why that process works. Eureka presents math as a story, one that develops from grades PK through 12. In A Story of Functions, our high school curriculum, this sequencing has joined with the methods of instruction that have been proven to work, in this nation and abroad.

Written by Stephen Hake, author of the Saxon Middle Grades programs, Saxon Intermediate 3 is ideal for students looking for a textbook approach that provides a smooth transition into Math 5/4. It is also helpful for students who are coming to Saxon from other programs. Math Intermediate 3 teaches mathematical concepts through informative lessons, helpful diagrams, and

interactive activities and investigations.
