Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is *Collaborative Statistics*, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. The implementation of the Pennsylvania Algebra 1 Keystone Exam brought many changes to the mathematics classroom for both teachers and students. The purpose of this case study will be to explore how teachers at a charter school respond to testing requirements through adjustments in how and what they teach and to understand and explain the disconnect between teachers enacted and idealized curricula. The hypothesis is that when courses are tied to high-stakes exams, teachers' modifications in instruction will result in a curriculum and instruction that more closely follows the formal curriculum. As such, this study will focus on answering the following questions: 1.) How are the participating math teachers structuring student learning to prepare their students for success on the Algebra 1 Keystone Exam? 2.) What rationale does each participating math teacher give for explaining why they structure student learning the way they do and how does this rationale connect to preparing students for success on the Algebra 1 Keystone Exam? 3.) In what ways do teachers discuss their intentions to modify both what they teach and how they teach? And why do they make such decisions? This qualitative multi-case study collected data from teacher lesson plans, teacher observations, and interviews. Data was analyzed utilizing a framework that was based on the research questions as well as the literature review streams of high-stakes assessments, teacher autonomy, and the enacted curriculum. Four key findings emerged from this study: (1) The teachers followed good teaching practices and not just test preparation techniques, (2) there was a focus on the process of doing mathematics and not just the product, (3) the teachers were aware that their students were not able to fully engage in a student-centered program of instruction, and (4) the Algebra 1 Keystone teachers were ultimately held to the practicalities of the exam. Based on the findings, it was recommended that administrators should utilize lesson study techniques to further student development, create internalized professional development for their teachers, and implement the CRAMATH method in order to develop abstract thinking in Algebra 1 students.
