Riddle-Me-Math Turner Publishing Company
Do not worry about your difficulties in mathematics; I can assure you that mine are still greater.—Albert Einstein Everyone has heard students ' most common complaint in math class: “ Why do I need to learn this? I ' ll never use it when I ' m older! ” Some of us have even been that complainer. Many people ' s difficulties with learning math in school follow them into adulthood, by which time they often assume that it ' s too late to do anything about it. But even though it ' s true that the average person has no need in daily life to remember what the number for Pi is and what it represents, that doesn ' t mean that math serves no purpose for anybody with access to a calculator. In Your Daily Math, veteran math educator Laura Laing lays out a year ' s worth of exercises meant to get you thinking about math in a different way. Laing ' s approach breaks down her 366 exercises into seven categories, one for each day of the week: Number Sense, Algebra, Geometry, Application, Probability & Statistics, Logic, and Grab Bag. Laing ' s approach treats these math and various number-related logic problems as fun brain exercises. Yes, there are equations here, but nothing that the average adult—even those who always hated math class—can ' t handle. There are also graphs, geometry, statistics, and logic problems, many of them centered around problems that could occur in real life. Think of Your Daily Math not as homework but instead as your daily cognitive workout.

Mathematics Puzzles, Grades 4 - 8 Independently Published
The amazing story of one of the greatest math problems of all time and the reclusive genius who solved it In the tradition of Fermat ' s Enigma and Prime Obsession, George Szpiro brings to life the giants of mathematics who struggled to prove a theorem for a century and the mysterious man from St. Petersburg, Grigory Perelman, who fi nally accomplished the impossible. In 1904 Henri Poincar é developed the Poincar é Conjecture, an attempt to understand higher-dimensional space and possibly the shape of the universe. The problem was he couldn ' t prove it. A century later it was named a Millennium Prize problem, one of the seven hardest problems we can imagine. Now this holy grail of mathematics has been found. Accessibly interweaving history and math, Szpiro captures the passion, frustration, and excitement of the hunt, and provides a fascinating portrait of a contemporary noble-genius.

Oval Track and Other Permutation Puzzles The Rosen Publishing Group, Inc

This book consists of the best riddles of all time. These riddles are categorized to optimize your attention and reasoning capabilities. As you go along the book, riddles become tougher and more complicated. The easiest riddles are on the first chapter to warm you up. They are followed by the best 'what am I?' riddles and 'what is it?' riddles. These should help you get into the right state of mind for the other tricky riddles. There are also word puzzles and mathematical brain teasers that kids will love. IMPORTANT NOTE: Take it one riddle at a time. The way these riddles are constructed can be equally confusing. It is important that you read attentively on how the riddles are constructed and delivered. The answers are revealed at the latter

part of the book. It is best to crack the riddles from top to bottom. Others prefer skipping chapters and going directly to chapters that catches their attention. It is up to you. The Use of Algebra, Permutations and Excel to Solve Puzzles Teaching Resources

Put your mathematical thinking cap on--because even though these puzzles are toughies, they take insight and brainwork to solve, not a knowledge of calculus or linear algebra or any other kind of advanced math. Consider for a moment: * How can you divide a regular pentagon into five identical pentagonal shapes? * What is the only decade in American history to contain four prime-numbered years? * What three right triangles with integer sides have areas numerically equal to twice their perimeters? Don't worry if the answers don't spring to mind immediately; you'll have plenty of company. Compute without calculators; study the "survival of the splittest" by arithmetically analyzing a little amoeba reproduction; and investigate whether or not a rich man's children are getting a "square deal" with their inheritance. Just don't give up, because you'll have a lot of satisfaction when you figure them out.
