Do not worry about your difficulties in mathematics; I can assure you that mine are still greater.—Albert Einstein Everyone has heard students' most common complaint in math class: "Why do I need to learn this? I'll never use it when I'm older!" Some of us have even been that complainer. Many people's difficulties with learning math in school follow them into adulthood, by which time they often assume that it's too late to do anything about it. But even though it's true that the average person has no need in daily life to remember what the number for Pi is and what it represents, that doesn't mean that math serves no purpose for anybody with access to a calculator. In Your Daily Math, veteran math educator Laura Laing lays out a year's worth of exercises meant to get you thinking about math in a different way. Laing's approach breaks down her 366 exercises into seven categories, one for each day of the week: Number Sense, Algebra, Geometry, Application, Probability & Statistics, Logic, and Grab Bag. Laing's approach treats these math and various number-related logic problems as fun brain exercises. Yes, there are equations here, but nothing that the average adult—even those who always hated math class—can't handle. There are also graphs, geometry, statistics, and logic problems, many of them centered around problems that could occur in real life. Think of Your Daily Math not as homework but instead as your daily cognitive workout.

subject for many students and teaching through puzzles and riddles helps children overcome these learning problems in a fun and productive way. In fact, math can be so complex sometimes that many students choose to give up learning this essential subject that is the basis for other sciences. Math riddles follow a popular current trend in education known as gamification which seeks to mix learning and fun. If students are having fun while they learn, they will be more motivated to tackle harder subjects and advance their own learning. Even children who are already adept in a subject can benefit from gamification, as it ensures they will not grow bored with the subject and they are always challenging themselves to improve. The challenge of solving riddles and the sense of pride children get from working hard to get a riddle right plays directly into this trend to turn math into a game. Math riddles really work to get your child engaged and personally invested in their own education because they make learning fun. The different difficulties serve as 'levels' for your child to test their knowledge and expand into a better understanding of new concepts. When learning and playing are combined, your child will begin to see their education as something they want to actively participate in rather than something they passively learn in a classroom. Math riddles that make math exciting and engaging can teach kids the value of learning. They mix up the tired formula of worksheets while showing kids how they can apply math to their daily lives in unique ways. Letting kids figure out the answers to these puzzles teaches them problem solving skills that they can apply to all areas of life. It also allows them to feel the joy that comes with working hard on something and coming up with the correct solution. Providing gentle guidance towards the correct answer when your child is uncertain shows them that you are willing to take an active role in encouraging and

supporting their education. Math riddles teach critical skills while encouraging cooperation and engagement from the whole family.
