Building Intelligent Interactive Tutors discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs. The impact of computers has not been generally felt in education due to lack of hardware, teacher training, and sophisticated software. and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching. Dr. Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible, whether for classroom or life-long learning. The book describes multidisciplinary approaches to using computers for teaching, reports on research, development, and real-world experiences, and discusses intelligent tutors, web-based learning systems, adaptive learning systems, intelligent agents

and intelligent multimedia. It is recommended for professionals, graduate students, and others in computer science and educational technology who are developing online tutoring systems to support e-learning, and who want to build intelligence into the system. Combines both theory and practice to offer most in-depth and up-to-date treatment of intelligent tutoring systems available Presents powerful drivers of virtual teaching systems, including cognitive science, artificial intelligence, and the Internet Features algorithmic material that enables programmers and researchers to design building components and intelligent systems

For Math Tutors Barron's Educational Series Education is one of the largest sectors of the U.S. economy--yet scholars, educators, policymakers, and parents do not agree about what the money spent on education really buys. In particular, they do not agree on how much education improves children's ability to learn or whether the things children learn in school truly improve their chances for success as adults. If schooling increases how much students know and what they know does pay off later, then it is important to ask what schools can do to increase students' learning and earning. The essays in this book report estimates of the effects of learning on earnings and other life outcomes. They also examine whether

particular aspects of schooling--such as the age at which children begin school, classroom size, and curriculum--or structural reform--such as national or statewide examinations or school choice--affect learning. Taken together, their findings suggest that liberals are correct in saying that more investment is needed in early education, that class sizes should be further reduced, and that challenging national or state standards should be established. But they also provide support for conservatives who ask for a more demanding curriculum and greater school choice. Contributors include John Bishop, Eric Hanushek, James Heckman, Christopher Jencks, Caroline Minter Hoxby, Fred Mosteller, and Christopher Winship. This volume describes how to conceptualize, perform, and critique traditional generalized linear models (GLMs) from a Bayesian perspective and how to use modern computational methods to summarize inferences using simulation. Introducing dynamic modeling for GLMs and containing over 1000 references and equations, Generalized Linear Models considers parametric and semiparametric approaches to overdispersed GLMs, presents methods of analyzing correlated binary data using latent variables. It also proposes a semiparametric method to model link functions for binary response data, and identifies areas of important future research and new applications of GLMs.

This book is designed to help you master the Praxis Mathematics Content Knowledge 5161 test. The book includes a complete review of all topics: Number and Quantity, Algebra, Functions, Trigonometry, Calculus, Geometry, Probability and Statistics, Discrete Mathematics. The book has 6 Full-length Practice Tests with detailed solutions for all questions. It is recommended that you take Test 1 as a diagnostic test to understand your current level of expertise and in which area you need improvement. Afterwards, review the topic summaries of the Praxis Mathematics Content Knowledge 5161 test in the book. After completing the review of all topics, use the five remaining practice tests to help improve your score and exhibit real test-taking conditions. There is no greater substitute than to study and practice. Be sure to time yourself during the Praxis Mathematics

Content Knowledge 5161 practice tests with the appropriate time limit of 150 minutes. After completing the practice tests, immediately use the answer key and detailed solution to check your answers. Review all answers. Take the time to carefully read the explanations of problems you got incorrect. If you find yourself continually missing the same type of questions, look back at the topic summaries and review the theorems and examples. Set a goal of improvement for each practice test. The Author, Brian(Yeon) Rhee, obtained a Masters of Arts Degree in Statistics at Columbia University, NY. He served as the Mathematical Statistician at the Bureau of Labor Statistics, DC.
