Are we alone in this cosmos, or do we yet have to come to terms with the actual existence of alien life? Never before has so much time and concentrated effort been spent by so many scientists and writers in the pursuit of the answer to this fundamental question. In this extraordinary book, major scientists involved in the search for extraterrestrial intelligence known as SETI explain their work and reveal their secret thoughts. Now, in joining them here, are some of the best speculative thinkers, from Arthur C. Clarke and Isaac Asimov to Gregory Benford, who address the major philosophical questions involved. Intriguing, suspense-filled and intense, this book promises to deliver more than just mundane facts and theory.

ReAction! gives a scientist's and artist's response to the dark and bright sides of chemistry found in 140 films, most of them contemporary Hollywood feature films but also a few documentaries, shorts, silents, and international films. Even though there are some examples of screen chemistry between the actors and of behind-the-scenes special effects, this book is really about the chemistry when it is part of the narrative. It is about the dualities of Dr. Jekyll vs. inventor chemists, the invisible man vs. forensic

chemists, chemical weapons vs. classroom chemistry, chemical companies that knowingly pollute the environment vs. altruistic research chemists trying to make the world a better place to live, and, finally, about people who choose to experiment with mind-altering drugs vs. the drug discovery process. Little did Jekyll know when he brought the Hyde formula to his lips that his personality split would provide the central metaphor that would come to describe chemistry in the movies. This book explores the two movie faces of this supposedly neutral science. Watching films with chemical eyes, Dr. Jekyll is recast as a chemist engaged in psychopharmaceutical research but who becomes addicted to his own formula. He is balanced by the often wacky inventor chemists who make their discoveries by trial-and-error.

'Highly recommended' Financial Times Today we know of only a single planet that hosts life: the Earth. But across a Universe of at least 100 billion possibly habitable worlds, surely our planet isn't the only one that, like the porridge Goldilocks sought, is just right for life? Astrobiologists search the galaxy for conditions that are suitable for life to exist, focusing on similar worlds located at the perfect distance from their Sun, within the aptly named 'Goldilocks Zone'. Such a place might have liquid water on its surface, and may therefore support a thriving biosphere. What might life look like on other worlds? It is possible to make best-guesses using facts rooted in science, and by studying 'extremophiles' – organisms such as the near-indestructible water bears, which can survive in the harshest conditions that Earth, and even space, can offer. Goldilocks and the Water Bears is a tale of the origins and evolution of life, and the quest to find it on other planets, on moons, in other galaxies, and throughout the Universe.

When a seventy-year-old man named Eddie visits the country of his birth, the Netherlands, nearly fifty years after he has moved to the United States, he has an odd encounter in a flea market. An elderly fellow persuades him to buy an old computer monitor, one that produces shocking images from his past. He does so and unknowingly and drastically changes his life. Eddie takes the old monitor home with him to America, only to be surprised when the man from the flea market arrives on his doorstep with a woman. They are from another dimension and have been observing him since birth. Now they need Eddie's help in order to prevent the destruction of the earth. The beings ask him to join their mission, and in order to make it easier for him, they clone him, giving him a younger body to house his consciousness and bonding him with the woman, whom he now knows as Jane. Their goal: to serve as the technical team that will delay and ultimately curtail global weapons development progress. In this science fiction novel, a man works with two aliens to inhibit nuclear proliferation on earth and save humanity from itself.

Last Shuttle Flight, First Alien Contact (PARTS 1 to 3): Omnibus Edition Princeton University Press  
Discover a groundbreaking new way of thinking about life, society, and the future of our species that bridges science and human history. Could humans unknowingly be a part of a larger superorganism—one with its own motivations and goals, one that is alive, and conscious, and has the power to shape the future of our species? This is the fascinating theory from author and futurist Byron Reese, who calls this human superorganism “Agora.” In *We Are Agora*, Reese starts by asking the question, “What is life and how did it form?” From there, he looks at how multicellular life came about, how consciousness emerged, and how other superorganisms in nature have formed. Then, he poses eight big questions based on the Agora theory, including: If ants have colonies, bees have hives, and we have our bodies, how does Agora manifest itself? Does it have a body? Can Agora explain things that happen that are both under our control and near universally undesirable, such as war? How can Agora theory explain long-term progress we’ve made in the world? In this unique and ambitious work that spans all of human history and looks boldly into its future, Reese melds science and history to look at the human species from a fresh new perspective. Told with his characteristic wit and compulsive readability, *We Are Agora* will give readers a better understanding of where we’ve been, where we’re going, and how our fates are intertwined.

Explore the real science behind the Cartoon Network phenomenon *Rick and Morty*—one of television's most irreverent, whip-smart, and darkly hilarious shows—and discover how close we are to Rick's many experiments becoming a reality. Adult Swim's *Rick and Morty* is one of the smartest (and most insane) shows on television. Genius alcoholic Rick Sanchez and his hapless grandson Morty have explored everything from particle physics to human augmentation and much more in their intergalactic adventures through the multiverse. With biting humor and plenty of nihilism, *Rick and Morty* employs cutting-edge scientific theories in every episode. But, outside of Rick's garage laboratory, what are these theories truly about and what can they teach us about ourselves? Blending biology, chemistry, and physics basics with accessible—and witty—prose, *The Science of Rick and Morty* equips you with the scientific foundation to thoroughly understand Rick's experiments from the show, such as how we can use dark matter and energy, just what is intelligence hacking, and whether or not you can really

control a cockroach's nervous system with your tongue. Perfect for longtime and new fans of the show, this is the ultimate segue into discovering more about our complicated and fascinating universe.

The accounts given by extraterrestrials in this volume are about events that occurred in our solar system many millions of years ago. In that ancient time the solar system consisted of four planets and four "radian systems" that orbited the central sun. The four planets of the solar system are known today as Venus, Earth, Mars and a now-totally shattered world that was called Maldec. The term "radian" applies to the astronomical bodies we presently call Jupiter, Saturn, Uranus and Neptune. The original satellites of these radians are generally called moons by Earth astronomers, but the extraterrestrials prefer to call them planetoids. This book reflects the personal views of a number of different types of extraterrestrials regarding the state of the local solar system and the state of the Earth.

What if UFOs are real? Where could they be from, and how could they have traveled here? What advanced technology must they possess to execute the fantastic maneuvers they are routinely reported to make? Astronomer William R. Alshuler takes a fascinating look at the reported attributes of UFOs through the lens of known science and physics and explains how they might be doing the weird and incredible things they are known to do. Along the way, he examines the possibilities and problems of traveling faster than light, interdimensionally, and via teleportation, as well as the veracity of UFO reports, insights into potential alien motives, and alien biochemistry.

All of Jack's life, he had experienced many close calls with serious injury or death. They began when he was very young and continued throughout his life. He always believed he was just lucky, but at the age of about twenty, he came to realize God and his angels, indeed, were protecting him. All of the supernatural events that happened to Jack through the years are real. Even as a teenager, he had a premonition of his younger brother's death. For obvious reasons, he only told a few people just bits and pieces of the strange things that had happened to him. He didn't want people to think he was crazy. In fact, for his entire life, he never even told his parents about these experiences. Jack became a very passionate motorcyclist as a means to try to balance the extreme anxiety he often felt as a result of his otherworldly experiences. The many motorcycle trips he took were therapeutic for him in so many ways. Over time, he developed a rather unique theory about the direction mankind was taking and the shape of things to come. More than anything else, this is the story about the ups and downs most people face in life and how having complete trust in God can get you through even the most difficult situations.

Where would you look for alien life? An astronomer and science popularizer explains the basics of astrobiology to outline five plausible scenarios for finding extraterrestrials Long before space travel was possible, the idea of life beyond Earth transfixed humans. In this fascinating book, astronomer Jon Willis explores the science of astrobiology and the possibility of locating other life in our own galaxy. Describing the most recent discoveries by space exploration missions, including the Kepler space telescope, the Mars Curiosity rover, and the New Horizons probe, Willis asks readers to imagine--and choose among--five scenarios for finding life. He encourages us to wonder whether life might exist within Mars's subsoil ice. He reveals the vital possibilities on the water-ice moons Europa and Enceladus. He views Saturn's moon Titan through the lens of our own planet's ancient past. And, he even looks beyond our solar system, investigating the top candidates for a "second Earth" in a myriad of exoplanets and imagining the case of a radio signal arriving from deep space. Covering the most up-to-date research, this accessibly written book provides readers with the basic knowledge necessary to decide where they would look for alien life.

Venture into the blackness of space with Dewey D. Whites well-wrought *The Deep, Wide, and Dark*. The science is nothing short of sorcery as an extra-terrestrial humanoid named John Jay Corsey gives mankind a dimensional boost from Einsteins quantum theory for the love of a twenty-year-old stripper. With science heretofore unknown to humans but which was found to be related to the alien spacecraft that crash-landed near Roswell, New Mexico, Corsey becomes the center of a massive project to build the first faster than light starship to take flight into universa incognita searching for two unearthly elements, but quickly more than rocks are found by the newly-minted Space Marine Corps. Corsey found mankind (specifically the U.S. government) unprepared but willing to build the machine. They jumped right in to the project with the verve and gusto typical of modern man: cobbling together human and extra-terrestrial science to make it a shining reality. On a fenced-in, 200 sq. mile swath of Arizona-New Mexico desert, Sol Base One is built. The nascent masters of the deep, wide, and dark universal empyrean, the Space Marines Corps recruits the best minds and bodies to man the Terrain Explorer, the first starship in human history. The rush to build it becomes a race as world politics views it as an unwise decision and prepares to stymie the ships launch after the Space Marines crafty commandant refuses to reveals the program and its intentions. The next decision made is to launch the mission (425 men on board the Terrain Explorer) before the U.N. could send in inspection teams. And thus, the fate of humanitys first venture into the stars is sealed. Join Capt. Jackson Edison Jed Devlon and the crew of the Terrain Explorer in what promises to be a thrilling, masterful exploration of the possibilities of time and space. Will they land on earth-like worlds such as humanity knows, therefore solidifying the fact of infinite replication in the universe? Who, amongst the extra-terrestrial races will they meet and who will be their friend or enemy? How will they survive? The permutations grip readers with excitement. The writing is riveting in detail and shines with crystal-clear believability. The future is at stake

Who is Andrew Elric, and what's he doing here? Says he's here with answers. As

Andrew would explain it, "We live our lives shrouded with mysteries. We're compelled to show faith in explanations that we really don't believe in—the origins of our being, the nature and existence of God, are we alone in the universe? Less weighty issues as well as stuff we'd just like to know—who really shot Kennedy? What happened to Jimmy Hoffa? You think about it and know there really are answers to all of it, but you don't have access to them. I've got those answers and, more importantly, proof for all of it. Some of it you can hold in your hand. You follow the news, you know this place is going to blow. I'm here to try and stop it. Religion, race, nationalism . . . We all come from the same place. But the world has suffered through too many charlatans and false prophets. I'm going to use these proofs to get you savages to settle down." Andrew has recruited renowned attorney, author, and sports agent Aron Samuelson to help him get the word out. Aron, in the throes of a midlife crisis, is looking for the next "big thing" in his life. As they say, be careful what you wish for.
