Based on in-depth interviews with more than 200 leading entrepreneurs, a lecturer at the Stanford Graduate School of Business identifies the six essential disciplines needed to transform your ideas into real-world successes. Each of us has the capacity to spot opportunities, invent products, and build businesses—even \$100 million businesses. How do some people turn ideas into enterprises that endure? Why do some people succeed when so many others fail? The Creator's Code unlocks the six essential skills that turn small notions into big companies. This landmark book is based on 200 interviews with today's leading entrepreneurs including the founders of

LinkedIn, Chipotle, eBay, Under Armour, Tesla Motors, SpaceX, Spanx, Airbnb, PayPal, Jetblue, Gilt Groupe, Theranos, and Dropbox. Over the course of five years, Amy Wilkinson conducted rigorous interviews and analyzed research across many different fields. From the creators of the companies ranging from Yelp to Chobani to Zipcar, she found that entrepreneurial success works in much the same way. Creators are not born with an innate ability to conceive and build \$100 million enterprises. They work at it. They all share fundamental skills that can be learned, practiced, and passed on. The Creator's Code reveals six skills that make creators of all kinds of endeavors breakthrough. These skills aren't rare gifts or slim chance talents. Entrepreneurship, Wilkinson demonstrates, is accessible to everyone.

This updated version of the 2000 original is still the only complete resource on the market for finding word parts needed to express a concept. Aside from catering to those who wish to expand their vocabulary, the purpose of this dictionary is to provide convenient word parts to those who may be interested in inventing or deciphering words bearing an established and embedded meaning. Like the first edition, this work is split into three parts presenting the prefixes, suffixes, combining forms, and roots that fit together to form words in English. Part I, the Dictionary proper, provides an alphabetical listing of nearly

4,700 word parts, each entry including a brief definition and two examples of words using that unit. This section benefits from several additions, the most notable of which are embedded etymologies for each entry. Part II, the Finder, is a reverse dictionary of word parts allowing users to start with a meaning or concept and then find word parts which express that meaning. Still the only reverse dictionary of its kind, Part II is updated with over 1,000 new search terms. Part III collects word parts in another reverse dictionary under 18 convenient categories. Each pre-existing category has been expanded when possible, and three entirely new categories have also been added (Eating, Experts, and Measurement Science).
