"The most direct, irreverent and devious self-improvement book on the market." There is nothing "pretty" about this book. It's about doing what it takes to "get what you want." Whether you want to get rich, get laid or get even or anything else this book will give you the straightforward insight and knowledge to do it. This is not a "white lighters" book of "manifestation" but a down and dirty no-holds-barred grimoire designed to set your brain in a fixed direction toward your goal. Sometimes it takes all the subtlety of a sledgehammer of get the point across and that is why "The Forbidden Book of Getting What You Want" was written. Warning! "The Forbidden Book of Getting What You Want" is a trap. Once you read it you can't "un-read" it.

The first work ever published on this topic, this book summarizes everything you need to know to prepare for the neurosurgery oral examinations. It was designed as a quick and easily accessible reference for residents, with sections on medical management, surgical techniques, and insights of how to study for the test. Key features: - Comprehensive and concise - key facts summarized in 220 pages - Straightforward organization for quick access and easy memorization of the most vital information - More than 70 illustrations to highlight core concepts - Helpful hints that give you the benefit of the author's experience Here is the convenient study guide that all neurosurgical residents will want available for reliable reference. No other resource is as concise and easy to use. Take advantage of this outstanding tool to ensure your success on the oral boards!

Fm 5-34 Engineer Field Data

Underwater Physiology is a collection of papers that deals with the physiologically limiting effects of undersea, high pressure exposure ranging from fundamental biological reactions, through integration of physiological stresses, and to limits actually experienced in deep diving. Papers discuss oxygen, the mechanisms of toxicity, and the effects of oxygen on cells and systems such as its pathological and physiological influences in the neurosensory ocular tissue. Other papers discuss the physical effects of pressure and gases on cellular function, protein structure, and the possibility of alleviating symptoms through the administration of drugs. Tests in mice show that various gases exhibit qualitative and semi-quantitative differences in the characteristics of sickness, reactions to hypoxia, and the time before the onset of symptoms. A computer, programmed for nonlinear gas transfer and other variables, running in real time can compute directly from the breathing mixture and provide a real time solution to decompression sickness under various conditions. A combined therapeutic approach, recompression and dextran (an effective lipemic clearing agent) should be capable of treating decompression sickness in humans. Other papers investigate the influence of inert gases and pressure on the central nervous system, as well as, situations in undersea and manned chamber operations. This collection can prove valuable for physiologists, biochemists, cellular biologists, and researchers involved in deep sea diving.
