Jessica Harrison, a junior partner at a prestigious Florida law firm, and Robin Wilson, a young law associate, find their bond to each other continuing to deepen. However, although they desire to be together, family interference and business protocol threaten to expose and perhaps even destroy their relationship; moves that could conceivably bring professional harm and personal upheaval into their lives. Undaunted, they fight back, keeping their trademark humor firmly in place

as a balance to the more difficult times they share. In spite of all that might conspire against them, Jess and Robin find that the resulting turmoil in their lives has the potential to bring them even closer together. Through diversity, they now have the courage to voice to one another their most profound and considerable appeal.

With contributions by top graphics researchers and professionals, this volume covers computer graphics, interactive systems, and human-computer interaction. Graphics Interface occupies a niche among conferences in that it seeks to combine and bridge research topics in and across these areas. Beginning in 1969 as the " Canadian Man-Computer Communications Seminar " (CMCCS), it is the oldest regularly scheduled computer graphics and human-computer interaction conference. Graphics Interface 2009 took place in Kelowna, British Columbia, Canada from May 25 to May 27. The papers contributed here are from talks given at the annual Graphics Interface conference.

The Yearbook addresses the overriding question: what are the effects of the ' opening up ' of science to the media? Theoretical considerations and a host of empirical studies covering different configurations provide an in-depth analysis of the sciences ' media connection and its repercussions on science itself. They help to form a sound judgement on this recent development.

The mobile Web is still evolving, and this is an exciting time of early development, but some hurdles still need to be overcome. This Library Technology Reports examines the various components of the mobile web and explores how they can and have been utilized by librarians. In the Report, author and library-

technology blogger Ellyssa Kroski outlines the components of the mobile Web: the users, devices, the operating systems, the services, the content and illuminates the research tracking how users currently engage with information on the World Wide Web via their mobile devices. Kroski also details several library mobile initiatives and provides a "how to" chapter for libraries interested in developing a mobile experience for their users. *An Examination of Competition in the Wireless Industry* Syngress Preliminary Material -- Introduction /Howard Rheingold -- Overview /Martin Rieser -- Pockets of Plenty: An Archaeology of Mobile Media /Erkki Huhtamo -- The Temporal and Spatial Design of Video and Film-based Installation Art in the 60s and 70s: Their Inherent Perception Processes and Effects on the Perceivers' Actions /Susanne Jaschko -- Forgotten Histories of Interactive Space /Martin Rieser -- Art by Telephone: From Static to Mobile Interfaces /Adriana de Souza e Silva -- Mobile/Audience: Thinking the Contradictions /Mary Griffiths and Sean Cubitt -- Towards a Language of Mobile Media /Jon Dovey and Constance Fleuriot -- Snapshots from Curating Mobility: (If you build it, they won't necessarily come) /Beryl Graham -- Beyond Mapping: New Strategies for Meaning in Locative Artworks /Martin Rieser -- Digital Media and Architecture--An Observation /Anke Jacob -- Urban Screens as the Visualization Zone of the City's Invisible Communication Sphere /Mirjam Struppek -- Future Physical: The Creative User and theme of response-ABILITY /Debbi Lander -- 'A Fracture in Reality': Networked Narratives as Imaginary Fields of Action and Dislocation /Andrea Zapp -- What makes mediascapes compelling?: Insights from the Riot! 1831 case-study /Josephine Reid and Richard Hull -- Hopstory: A study in place-based, historically inspired narrative /Valentina Nisi and Glorianna Davenport -- The Media Portrait of Liberties: A Non-linear Community Portrait /Valentina Nisi, Mads Haahr and Glorianna Davenport --

These services include high-speed data, mobile Internet access and entertainment such as games, music and video programs. Indeed, as voice communications are substituted by data communications, software -rather than terminals or networks- has become the driver of the wireless industry. Meanwhile, services are becoming increasingly specialized. Why has the road to multimedia cellular been so difficult? These benefits of the mobile Internet have come with the costs of a massive transition that has coincided with

the bust of stock markets and the technology segments worldwide, controversial and costly license auctions in several lead markets, dated or mistaken regulatory policies, the clash between the early hype and the pioneering realities of the mobile Internet. But these are generalities that barely scratch the surface. The devil is in the details. And it is these details that *Competition for the Mobile Internet* addresses. *The Mobile Audience* MIT Press Looks at the native environment of the iPhone and describes how to build software for the device. *Graphics Interface 2009* MIT Press *Windows Small Business Server 2008* provides all the tools small companies need to improve collaboration, enhance productivity, and manage and secure all their information. activity but differs in its operation from what is traditionally considered "regulation." Where regulation is often industry-specific and involves the direct setting of prices, product characteristics, or entry, antitrust law focuses more broadly on maintaining certain basic rules of competition. In these lectures Michael Whinston offers an accessible and lucid account of the economics behind antitrust law, looking at some of the most recent developments in antitrust economics and highlighting areas that require further research. He focuses on three areas: price fixing, in which competitors agree to restrict output or raise price; horizontal mergers, in which competitors agree to merge their operations; and exclusionary vertical contracts, in which a competitor seeks to exclude a rival. Antitrust commentators widely regard the prohibition on price fixing as the most settled and economically sound area of antitrust. Whinston's discussion seeks to unsettle this view, suggesting that some fundamental issues in this area are, in fact, not well understood. In his discussion of horizontal mergers, Whinston describes the substantial advances in recent theoretical and empirical work and suggests fruitful directions for further research. The complex area of exclusionary vertical contracts is perhaps the most controversial in antitrust. The influential "Chicago School" cast doubt on arguments that vertical contracts could be profitably used to exclude rivals. Recent theoretical work, to which Whinston has made important contributions, instead shows that such contracts can be profitable tools for exclusion. Whinston's discussion sheds light on the controversy in this area and the nature of those recent theoretical contributions. Sponsored by the Universidad Torcuato Di Tella

Buying Guide 2008 Springer Science & Business Media

It is the fundamental challenge of the high-tech sector: A firm must innovate internally to succeed-yet its success may equally depend on corresponding innovations by

external firms. Whether a company develops a ubiquitous operating system or the software that runs on it, a VCR or the movies we play on it, every participant in a high-tech network is vulnerable to the innovative moves of its partners and competitors. Yet, in spite of this perilous situation, some firms have developed strategies that have made them industry powerhouses and world-class innovators. How? By becoming platform leaders -companies that provide the technological foundation on which other products, services, and systems are built. Platform leadership is the Holy Grail of high-tech industries, but it is difficult to achieve. In *Platform Leadership*, high-tech strategy experts Annabelle Gawer and Michael A. Cusumano reveal how Intel, Microsoft, and Cisco, as well as companies including Palm and NTT DoCoMo, have orchestrated industry innovations to support their products-and, in the process, established dominant market positions. Based on these in-depth case studies and on incisive analysis, the authors present their Four Levers Framework for designing and implementing a successful platform strategy-or for improving an existing strategy: 1. Determine the scope of the firm : Is it preferable to create product complements internally or let the "market" produce them? 2. Design product technology strategically : What degree of modularity is appropriate? Should product interfaces be open or closed? What information should leaders disclose to outside firms? 3. Shape relationships with external complementors : How can the company balance competition and collaboration with outside players? 4. Optimize internal organizational structures : What processes and systems will allow the company to manage internal and external conflicts of interest most effectively? For executives, strategists, and entrepreneurs in many high-tech arenas, this book shows how firms can orchestrate innovation to ensure their own competitive futures-and drive the evolution of their industry.

**AUTHORBIO:** Annabelle Gawer is Assistant Professor of Strategy and Management at INSEAD. Michael A. Cusumano is the Sloan Management Review Professor of Management at the MIT Sloan School, editor-in-chief and chairman of the board of the Sloan Management Review, and coauthor of the bestseller *Microsoft Secrets*.

The definitive account of the trillion-dollar payment card industry. The payment card business has evolved from its inception in the 1950s as a way to handle payment for expense-account lunches (the Diners Club card) into today's complex, sprawling industry that drives trillions of dollars in transaction volume each year. Paying with Plastic is the definitive source on an industry that has revolutionized the way we borrow and spend. More than a history book, *Paying with Plastic* delivers an entertaining discussion of the impact of an industry that epitomizes the notion of two-sided markets: those in which two or more customer groups receive value only if all sides are actively engaged. New to this second edition, the two-sided market discussion provides useful insight into the implications of these market dynamics for cardholder rewards, merchant interchange fees, and card acceptance. The authors, both of whom have researched the industry for more than 25 years, also examine the implications of the recent antitrust cases on the industry as well as other business and technological changes—including the massive consolidation brought about by bank mergers, the rise of the debit card, and the emergence of e-commerce—that could alter the payment card industry dramatically in the years to come.

Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political

economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.
