The mobile Web is still evolving, and this is an exciting time of early development, but some hurdles still need to be overcome. This Library Technology Reports examines the various components of the mobile web and explores how they can and have been utilized by librarians. In the Report, author and library-technology blogger Ellyssa Kroski outlines the components of the mobile

Web the users, devices, the operating systems, the services, the content and illuminates the research tracking how users currently engage with information on the World Wide Web via their mobile devices. Kroski also details several library mobile initiatives and provides a "how to" chapter for libraries interested in developing a mobile experience for their users.

Antitrust law regulates economic activity but differs in its operation from what is traditionally considered "regulation." Where regulation is often industry-specific and

involves the direct setting of prices, product characteristics, or entry, antitrust law focuses more broadly on maintaining certain basic rules of competition. In these lectures Michael Whinston offers an accessible and lucid account of the economics behind antitrust law, looking at some of the most recent developments in antitrust economics and highlighting areas that require further research. He focuses on three areas: price fixing, in which competitors agree to restrict output or raise price; horizontal mergers, in which competitors agree to merge their operations; and exclusionary vertical contracts, in which a competitor seeks to exclude a rival. Antitrust commentators widely regard the prohibition on price fixing as the most settled and economically sound area of antitrust. Whinston's discussion seeks to unsettle this view, suggesting that some fundamental issues in this area are, in fact, not well understood. In his discussion of horizontal mergers, Whinston describes the substantial advances in recent

theoretical and empirical work and suggests fruitful directions for further research. The complex area of exclusionary vertical contracts is perhaps the most controversial in antitrust. The influential "Chicago School" cast doubt on arguments that vertical contracts could be profitably used to exclude rivals. Recent theoretical work, to which Whinston has made important contributions, instead shows that such contracts can be profitable tools for exclusion. Whinston's discussion sheds light on the controversy in this area and the nature of those recent theoretical contributions. Whether a company develops a ubiquitous

operating system or the software that runs on it, a VCR or the movies we play on it, every participant in a high-tech network is vulnerable to the innovative moves of its partners and competitors. Yet, in spite of this perilous situation, some firms have developed strategies that have made them industry powerhouses and world-class innovators. How? By becoming platform leaders -companies that provide the technological foundation on which other products, services, and systems are built. Platform leadership is the Holy Grail of high-tech industries, but it is difficult to achieve. In Platform Leadership , high-tech strategy experts Annabelle Gawer and Michael A. Cusumano reveal how Intel, Microsoft, and Cisco, as well as companies including Palm and NTT DoCoMo, have orchestrated industry innovations to support their products-and, in the process, established dominant market positions. Based on these in-depth case studies and on incisive analysis, the authors present their Four Levers Framework for designing and implementing a successful platform strategy-or for improving an existing strategy: 1. Determine the scope of the firm : Is it preferable to create product complements internally or let the "market" produce them? 2. Design product technology strategically : What degree of modularity is appropriate? Should product interfaces be open or closed? What information should leaders disclose to outside firms? 3. Shape relationships with external complementors : How can the company balance competition and collaboration with outside players?

4. Optimize internal organizational structures : What processes and systems will allow the company to manage internal and external conflicts of interest most effectively? For executives, strategists, and entrepreneurs in many high-tech arenas, this book shows how firms can orchestrate innovation to ensure their own competitive futures-and drive the evolution of their industry.

AUTHORBIO: Annabelle Gawer is Assistant Professor of Strategy and Management at INSEAD. Michael A. Cusumano is the Sloan Management Review Professor of Management at the MIT Sloan School, editor-in-chief and chairman of the board of the Sloan Management Review , and coauthor of the bestseller Microsoft Secrets . Microsoft Small Business Server 2003 Unleashed University of Virginia Press PC Mag PC Magazine "O'Reilly Media, Inc." Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology,

growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

The Twenty-First-Century Media Industry: Economic and Managerial Implications in the Age of New Media examines the role that new media technologies are having on the traditional media industry from a media management perspective. Consumer behaviors and consumer expectations are being shaped by new media technologies. They now expect information on-demand and on-the-go as well as at their finger-tips via the Internet. In order to stay relevant, traditional media managers and practitioners are adapting to these consumer demands and expectations by developing new business models and new business philosophies to stay competitive. The contributors to this volume explore the business strategies being implemented by some media industries such as newspapers and the recording industry who are struggling to not only remain competitive and profitable, but also to survive. The Twenty-First-Century Media Industry provides an intriguing examination of how traditional media industries are adapting to new media technologies and evolving in the twenty-first century.

Millions of single people — whether never married or divorced — put a lot of energy into meeting and dating new people, but because they don't invest their true selves, their efforts often go nowhere. To counter this trend, Susan M. Campbell presents an approach to dating that many consider radical: Be honest about yourself and ask for what you want, up front. Campbell shows people how to have fun by flirting truthfully; date without getting ahead of the relationship; enjoy the freedom of being themselves; relate to their dates with honesty; realistically examine what a romantic partner can — and can't — offer in the way of fulfillment and happiness; and move forward when the time is right, or say goodbye if it's not working. On the way to finding the love of their lives, readers gain the tools they need to successfully manage the entire process.
