Phytoplasma-associated diseases are a major limiting factor to quality and productivity of many ornamentals, horticultural and other economically important agriculture crops worldwide. Annual losses due to phytoplasma diseases in many crops vary, but under the pathogen favorable conditions they always lead to disastrous consequences to farming community. As there is no effective cure for phytoplasma diseases, the management options emphasize on their exclusion, minimizing their spread by insect vectors and propagation materials and on development of host plant resistance. The phytoplasma associated plant diseases have a history of more than 50 years. Phytoplasmas have undoubtedly infected plants and cause diseases for centuries before they are described and proven to be the causal agents. But important progress related to identification of phytoplasmas only began after 1980 ' s. Phytoplasmas have emerged as the most serious constraints in the production of several crops all around the world during last four decades. Phytoplasmas constitute a major limiting factor to quality and productivity of cereals, horticultural, ornamentals and many other economically important crops all over the world. Rex Forrester's two great New Zealand hunting classics are to appear for the first time in a single volume. It is the story of the chopper boys, the men whose sweat, skill and heroism provided the foundation for the now-thriving deer-farming industry. Working in dangerous conditions in New Zealand's remote back country, these men risked serious injury, even death, for the adventure of it all - as well as sometimes for serious financial gain. Forrester's stories range from the 'meat hawk wars', poaching, and the transition from slaughter to live capture to the development of the net gun. Packed with yarns, jokes and close calls, this is essential reading for hunters and armchair-adventurers alike.
