This book provides medical students and physicians with a practical, step-by-step guide on how to write and publish a medical case report. The case report is the traditional way for physicians to describe their unique or unusual cases to a broad audience and it plays an important role in the discovery of new diseases or syndromes, unusual manifestations of disease, important adverse drug

reactions, and the generation of hypotheses for further study. This book guides readers through the process from choosing a case to report on to finding a publisher and then comment on future directions and potential new uses of case reports, including expanded computer case databases to optimize care for individual patients and new applications in medical education. Interspersed throughout the text are example case reports, many written by the authors, with commentary on their experiences working with those reports to provide context and aid readers in creating clear, concise, and useful case reports. offers a proven framework for improving--every day. James Clear, one of the world's leading experts on habit formation, reveals practical strategies that will teach you exactly how to form good habits, break bad ones, and master the tiny behaviors that lead to remarkable results. If you're having trouble changing your habits, the problem isn't you. The problem is your system. Bad habits repeat themselves again and again not because you don't want to change, but because you have the wrong system for change.

You do not rise to the level of your goals. You fall to the level of your systems. Here, you'll get a proven system that can take you to new heights. Clear is known for his ability to distill complex topics into simple behaviors that can be easily applied to daily life and work. Here, he draws on the most proven ideas from biology, psychology, and neuroscience to create an easy-to-understand guide for making good habits inevitable and bad habits impossible. Along the way, readers will be inspired and entertained with true stories from Olympic gold medalists, award-winning artists, business leaders, life-saving physicians, and star comedians who have used the science of small habits to master their craft and vault to the top of their field. Learn how to: make time for new habits (even when life gets crazy); overcome a lack of motivation and willpower; design your environment to make success easier; get back on track when you fall off course; ...and much more. A maverick scientist who co-founded the field of anthrozoology offers a controversial, thought-provoking, and unprecedented exploration of the psychology behind the inconsistent and often paradoxical ways we think, feel, and behave towards animals. How do we reconcile our love for cats and dogs (and rabbits, snakes, hamsters, gerbils, and goldfish) with our appetite for hamburgers and chicken breast and our use of medications that have been tested on lab mice? Why do so many of us—as meat eaters, recreational

hunters and fishermen, and visitors of zoos and circuses—take the moral high ground when it comes to condemning activities like cockfighting? And why are dogs considered pets in America but dinner in Korea? With *Some We Love, Some We Hate, Some We Eat*, Hal Herzog offers a lively and deeply intelligent look inside our complex and often paradoxical relationships with animals. Drawing on over two decades of research in the interdisciplinary field of anthrozoology, the science of human-animal relations, Herzog examines the moral and ethical decisions we all face when it comes to the furry and feathered creatures with whom we share this planet. Alternately poignant and laugh-out-loud funny,

Eat takes readers on a highly entertaining and illuminating journey through the full spectrum of human-animal relations, relating Dr. Herzog's groundbreaking research on animal rights activists, cockfighters, professional dog show handlers, veterinary students, biomedical researchers, and circus animal trainers. Through psychology, history, biology, sociology, cross-cultural analysis, current animal rights debates, and the morality and ethics surrounding the use and abuse of animals, Herzog carefully crafts a seamless narrative composed of real life anecdotes, academic and scientific research, cross-cultural examples, and his

Combining the intellectual rigor of Michael Pollan's *The Omnivore's Dilemma* with the wry observation of Bill Bryson's *A Walk in the Woods*, Herzog offers a refreshing new perspective on our lives with animals—one that will forever change the way we look at our relationships with other creatures and, in so doing, will also change the way we look at ourselves.

For most of us, one of the most rewarding, yet difficult tasks, is preparing messages to preach and teach. We are honored by God to stand before our congregation each week, and we want to give them the very best, but with the press of the many demands of ministry, sometimes that is difficult to do. And if you're like me, you prefer writing your own sermons because you have a special connection with your congregation that is hard to reach through a message someone else has written. In other words, no one knows your people like you do! Our new Pulpit Outline Series gives you a starting point - a sermon title,

---

a deductive sermon outline; and a relevant illustration you can use however you like. In this edition, rather than an outline, we have given you full manuscript messages that can be edited to suit your purposes. We invite you to make these messages your own, because only you know the people God has called you to preach to. And we are so honored that you've invested in this unique third volume in the Pulpit Outline series - 52 Funeral Sermons. We have put together the most tasteful, relevant, and Biblical messages possible. May God Bless You as You Share His Word!
