Making American healthcare work: 3 new eBooks get past ideology to deliver real solutions! Even after Obamacare, America's healthcare system is unsustainable and headed towards disaster. These three eBooks offer real solutions, not sterile ideology. In *Overhauling America's Healthcare Machine: Stop the Bleeding and Save Trillions*, leading healthcare expert and entrepreneur Douglas A. Perednia identifies the breathtaking complexity and specific inefficiencies that are driving the healthcare system towards collapse, and presents a new solution that protects patient and physician freedom, covers everyone, and won't bankrupt America. Perednia shows how to design a far simpler system: one that delivers care to everyone by drawing on the best of both market efficiency and public "universality" — and is backed with detailed logic and objective calculations. Next, in *Improving Healthcare Quality and Cost with Six Sigma*, four leading experts introduce Six Sigma from the standpoint of the healthcare professional, showing exactly how to implement it successfully in real-world environments. The first 100% hands-on, start-to-finish blueprint for

---

succeeding with Six Sigma in healthcare, this book covers every facet of Six Sigma in healthcare, demonstrating its use through examples and case studies from every area of the hospital: clinical, radiology, surgery, ICU, cardiovascular, laboratories, emergency, trauma, administrative services, staffing, billing, cafeteria, even central supply. Finally, in *Reengineering Healthcare: A Manifesto for Radically Rethinking Healthcare Delivery* Jim Champy ( " Reengineering the Corporation " ) and Dr. Harry Greenspun show how reengineering methodologies can deliver breakthrough performance and efficiency improvements both within individual healthcare organizations and throughout the entire system, eliminating much of the 40%+ of U.S. healthcare costs now dedicated to administration. They demonstrate how reengineering can refocus investments on aligning quality and providing accessible care for millions more people. From world-renowned healthcare management experts Dr. Doug Perednia, Praveen Gupta, Brett E. Trusko, Carolyn Pexton, H. James Harrington, Jim Champy, and Harry Greenspun, M.D. *Valuation Handbook - U.S. Guide to Cost of Capital* Primento

**Imaging of the Cardiovascular System, Thorax, and Abdomen** National Academies Press Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS—three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence—but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth

---

a national agenda"with state and local implications"for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors"which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. To Err

Is Human asserts that the problem is not bad people in health care"it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates"as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of

patients and the requirements of a changing health care system.
