Deaf people are usually regarded by the hearing world as having a lack, as missing a sense. Yet a definition of deaf people based on hearing loss obscures a wealth of ways in which societies have benefited from the significant contributions of deaf people. In this bold intervention into ongoing debates about disability and what it means to be human, experts from a variety of disciplines—neuroscience, linguistics, bioethics, history, cultural studies, education, public policy, art, and architecture—advance the concept of Deaf Gain and challenge assumptions about what is normal. Through their in-depth articulation of Deaf Gain, the editors and authors of this pathbreaking volume approach deafness as a distinct way of being in the world, one which opens up perceptions, perspectives, and insights that are less common to the majority of hearing persons. For example, deaf individuals tend to have unique capabilities in spatial and facial recognition, peripheral processing, and the detection of images. And users of sign language, which neuroscientists have shown to be biologically equivalent to speech, contribute toward a robust range of creative expression and understanding. By framing deafness in terms of its intellectual, creative, and cultural benefits, Deaf Gain recognizes physical and cognitive difference as a vital aspect of human diversity. Language is intrinsic as to expressing the feelings, thoughts, and fostering our emotions/intentions sharing with one another, whether if it's words, pictures, ideas, or whatever passes on with two individuals or groups. It's an important function that develop our relationship with others. Deaf people like to use sign language in such manner that share their valued communication which they can comfortably understand each other visually. The research shows that deaf and hearing children will learn sign language naturally if their parents and other people around them use the language. They will learn sign language in the same way as other children learn spoken languages like English. So it is important for schools to start teaching American Sign Language to students at a young age.
