After a year of preparation, eighteen year old Raven Smith has researched and planned out every detail of her summer vacation in Europe; those plans DO NOT include boys, romance, or falling in love (definitely not the last one). But, even before the plane touches-down her well-laid plans go dreadfully off-course. While still airborne, Raven finds a letter in her carry-on suitcase that her senile neighbor broke into her house to stash in her bag; the letter tells Raven to turn back, not to go to Europe, that an "evil agent of Hell" is looking for Raven and he will find her if she disregards the letter's message. But Raven does disregard the letter... Almost as soon as Raven steps foot onto Rome's streets, dark, seductive Andras starts showing up at nearly every site Raven visits; Raven finds herself drawn to Andras in a way she's never been drawn to anyone, while at the same time... he terrifies her. Then in comes Nicholas, an impossible-not-to-like Swedish guy, who is determined to keep Raven away from Andras... The two guys share a dark secret. Both are determined that Raven never learns the truth.

She doesn't know who to trust, or if she should trust anyone. If Raven frees herself from the deception twined around her... the most horrifying secret she could uncover, might be her own... her past... who she really is...and how the forces of Hell plan to use her to destroy the future...

The WHO global health sector strategy on sexually transmitted infections, 2016–2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the

health-care providers at the frontline – primary, secondary and tertiary health care.
