You cannot manually ack with the receive() method - use a SimpleMessageListenerContainer for an event-driven consumer with MANUAL acks and a ChannelAwareMessageListener. Or, use the template's execute() method which gives you access to the Channel - but then you will be using the lower-level RabbitMQ API, not the Message abstraction.. EDIT: You need to learn the underlying RabbitMQ Java API to ...

The RabbitMQ .NET client is an implementation of an AMQP client library for C# (and, implicitly, other .NET languages), and a binding exposing AMQP services via Microsoft's Windows Communication Foundation (WCF). This is the User Guide for the RabbitMQ .NET client library. It provides an overview of the codebase and the implemented API.
