Placement Human Geography

The field of interdisciplinary study which is focused on gender identity and gendered representation is known as gender studies.

There are several fields which are a part of gender studies such as women's studies, men's studies and queer studies. These fields in turn study various other fields such as literature, geography,

political science, cinema and law through the lens of gender and sexuality. It also seeks to examine how gender intersects with

race, ethnicity, location and disability. Gender studies generally use the term gender to refer to the social and cultural constructs of

masculinity and femininity, rather than the state of being entirely male or female. The topics included in this book on gender studies

are of utmost significance and bound to provide incredible

insights to readers. The book is appropriate for students seeking detailed information in this area as well as for experts.

Alfred Crosby almost alone redirected the attention of historians to ecological issues that were important precisely because they were global. In doing so, he answered those who believed that world history had become impossible as a consequence of the post-war proliferation of new historical specialities, including not only ecological history but also new social histories, areas studies, histories of mentalities and popular cultures, and studies of minorities, majorities, and ethnic groups. In the introduction to this volume, Professor Crosby recounts an intellectual path to ecological history that might stand as a rationale for world history in general. He simply decided to study the most pervasive and important aspects of human experience. By focusing on human universals like death and disease, his studies highlight the epidemic rather than the epiphenomenal.
