**Restraining Air Power** Routledge

This path-breaking volume reveals a little-known aspect of how Lashkar-e-Tayyaba, a jihadist terrorist group, functions in Pakistan and beyond by translating and commenting upon a range of publications produced and disseminated by Dar-ul-Andlus, the publishing wing of LeT. Only a fraction of LeT's cadres ever see battle: most of them are despatched on nation-wide "prozelytising" (dawa) missions to convert Pakistanis to their particular interpretation of Islam, in support of which LeT has developed a sophisticated propagandist literature. This canon of Islamist texts is the most popular and potent weapon in LeT's arsenal, and its scrutiny affords insights into how and who the group recruits; LeT's justification for jihad; its vision of itself in global and regional politics; the enemies LeT identifies and the allies it cultivates; and how and where it conducts its operations. Particular attention is paid to the role that LeT assigns to women by examining those writings which heap extravagant praise upon the mothers of aspirant jihadis, who bless their operations and martyrdom. It is only by understanding LeT's domestic functions as set out in these texts that one can begin to appreciate why Pakistan so fiercely supports it, despite mounting international pressure to disband the group.

South Asia is often viewed as a potential nuclear flashpoint and a probable source of nuclear terrorism. But, how valid are such perceptions? This book seeks to address this question and assesses the region ' s nuclear security from two principal standpoints. First, it evaluates the robustness of the Indo-Pakistani mutual deterrence by analysing the strength and weaknesses of the competing arguments regarding the issue. It also analyses the causes and consequences of nuclear arms race between India and Pakistan, the nature of deterrence structure in the region and the challenges of confidence building and arms control between the two countries in order to assess the robustness of South Asia ' s nuclear deterrence. Second, it assesses the safety and security of the nuclear assets and nuclear infrastructure of India and Pakistan. The author holds that the debate on South Asia ' s nuclear security is largely misplaced because the optimists tend to overemphasise the stabilising effects of nuclear weapons and the pessimists are too alarmists. It is argued that while the risks of nuclear weapons are significant, it is unlikely that India and Pakistan will give up their nuclear arsenals in the foreseeable future. Therefore, what needs to happen is that while nuclear elimination should be the long-term goal, in the interim years the two countries need to pursue minimum deterrence policies to reduce the likelihood of deterrence failure and the possibility of obtaining fissile materials by non-state actors.

Almost every state in the world has an army to protect it from external aggression, except in the case of Pakistan, where the relationship between the 'state' and the 'army' is in the reverse order. The Pakistan Army has the 'state'. The army has governed the 'state' directly during half of its existence and in the remaining half of its history indirectly. The Pakistan Army has also ensured that other independent organs of the state—executive and the judiciary—function under its shadow. The army has another unique feature ; it runs the biggest business conglomerate that owns everything from factories and bakeries to farmland and golf courses. In 2015, the Parliament by a two-third majority handed over another responsibility to the army—trial of civilians in military courts—on the ground that the criminal justice system and the civilian judiciary are incapable of handling the cases pertaining to terrorists. As the trials in summary military courts fall short as compared to national or international fair-trial standards, the risk of serious miscarriage of justice cannot be ruled out. Several armed conflicts are taking place in Pakistan in which the armed forces and its allies on war on terrorism—especially the military of

the United States of America (USA)—are involved in fighting several groups of militants and terrorists. The USA as well as the Pakistan military have used lethal drones against the citizens of Pakistan. The military's involvement on war on terror has led to devastating results in terms of loss of life, destruction of property; besides they have also been responsible for enforced disappearances, a serious crime against humanity. This book analyses the Military Justice System of Pakistan and makes an assessment of its international obligations under the international human rights law and the laws of armed conflict.

Pakistan has over the decades become a hotbed for the terrorist ideology often referred to as Jihadism. This book investigates the underlying principles of Pakistan's foreign policy from 1947 until the present day, and explains the rise of Jihadism as an offshoot of Pakistan's security concerns. The book goes on to discuss that from its inception as a separate state, Pakistan's foreign policy focused on 'seeking parity' with India and 'escaping' from an Indian South Asian identity. The desire to achieve parity with its much larger neighbour led Pakistan to seek the assistance and support of allies. The author analyses the relationship Pakistan has with Afghanistan, United States, China and the Muslim world, and looks at how these relationships are based on the desire that military, economic and diplomatic aid from these countries would bolster Pakistan's meagre resources in countering Indian economic and military strength. The book presents an interesting contribution to South Asian Studies, as well as studies on International Relations and Foreign Policy.

*Explaining Pakistan's Foreign Policy* Routledge

India and Pakistan have both never really accepted each other's existence. Their ties have been characterised by a lingering hostility and a pronounced qualitative and quantitative military imbalance in favour of India. Additionally, India took the lead in developing nuclear weapons while Pakistan only seriously embarked on this endeavour after India had already conducted its "peaceful nuclear explosion" in 1974. Having lost half of their country in 1971, and realising that they could never really hope to match India in conventional military might, Pakistan embarked on nuclear weapons development in the early 1970s more as a necessity rather than as a need. Despite adopting the more difficult route of uranium enrichment, Pakistan proved virtually unstoppable. While China provided some assistance to Pakistan, the United States maintained a marked ambivalence towards her quest for nuclear weapons – it sometimes applied sanctions against Pakistan while at other times, it opted to ignore what was happening by turning a blind eye. The weaponisation of their nuclear capability in 1998 led India and Pakistan to venture into the realm of doctrinal rethinking. Commencing with a revision of the conventional military doctrines, this led to India publishing its draft nuclear doctrine whereas Pakistan preferred ambiguity. The essential consideration herein was on how the conventional military thinking of both the countries has been influenced by the availability of nuclear weapons in their respective inventories. Along with this process of doctrinal evolution, both countries were required to establish viable and internationally acceptable nuclear weapon control systems. The doctrinal evolution was responsible for inducing several systemic changes in their armed forces, and their entire military system had to undergo significant changes. Simultaneously, these led to a fresh assessment of the comparative nuclear military potential of the two countries and how this could possibly be employed in a future conflict.

This book analyses the relationship between Pakistan and China in the post 9/11 period against the backdrop of Pakistan's domestic politics and proposes that the major source of continuity in the ties between the two countries is represented by the military. The evolution and continuity of

Sino-Pakistani relations are explored through three timely case studies: the port of Gwadar, where Chinese investment well pre-dates the advent of the Belt and Road Initiative; the China-Pakistan Economic Corridor, the "flagship project" of China's global ambitions; and how the relationship between China and Pakistan has played out in Afghanistan. The book assesses the extent of military influence in Pakistan's relations with China throughout the last 20 years in several key decision-making areas, ranging from internal security to elite recruitment. By looking at the extent of military prerogatives in Pakistan's domestic politics, the book reveals how the major source of continuity in the ties between the two countries was represented by the role that the military has played overtime. While since the announcement of the BRI elected representative have gained some leverage in decision-making, the military has invariably been the main port of call even under a civilian dispensation. A novel approach to the study of Sino-Pakistani relations, this book will be of interest to academics working on South Asian Politics, Chinese Politics and International Relations, Sino-Pakistani relations, civil-military ties, and China's role in Asia including the One Belt, One Road initiative.

The authors examine the militaries of China, France, the UK, India, and Israel to (1) identify different approaches to readiness, adaptability, and operational issues and (2) assess the ways in which units are trained both for specific and general deployments and for train, advise, and assist missions.

Nuclear Deterrence in Southern Asia Routledge

Pakistan was born as the creation of elite Urdu-speaking Muslims who sought to govern a state that would maintain their dominance. After rallying non-Urdu speaking leaders around him, Jinnah imposed a unitary definition of the new nation state that obliterated linguistic diversity. This centralisation - 'justified' by the Indian threat - fostered centrifugal forces that resulted in Bengali secessionism in 1971 and Baloch, as well as Mohajir, separatisms today. Concentration of power in the hands of the establishment remained the norm, and while authoritarianism peaked under military rule, democracy failed to usher in reform, and the rule of law remained fragile at best under Zulfikar Bhutto and later Nawaz Sharif. While Jinnah and Ayub Khan regarded religion as a cultural marker, since their time the Islamists have gradually prevailed. They benefited from the support of General Zia, while others, including sectarian groups, cashed in on their struggle against the establishment to woo the disenfranchised. Today, Pakistan faces existential challenges ranging from ethnic strife to Islamism, two sources of instability which hark back to elite domination. But the resilience of the country and its people, the resolve of the judiciary and hints of reform in the army may open a new and more stable chapter in its history.

This collection, comprising key works by James J. Wirtz, explains how different threat perceptions can lead to strategic surprise attack, intelligence failure and the failure of deterrence. This volume adopts a strategist's view of the issue of surprise and intelligence failure by placing these phenomena in the context of conflict between strong and weak actors in world affairs. A two-level theory explains the

incentives and perceptions of both parties when significant imbalances of military power exist between potential combatants, and how this situation sets the stage for strategic surprise and intelligence failure to occur. The volume illustrates this theory by applying it to the Kargil Crisis, attacks launched by non-state actors, and by offering a comparison of Pearl Harbor and the September 11, 2001 attacks. It explores the phenomenon of deterrence failure; specifically, how weaker parties in an enduring or nascent conflict come to believe that deterrent threats posed by militarily stronger antagonists will be undermined by various constraints, increasing the attractiveness of utilising surprise attack to achieve their objectives. This work also offers strategies that could mitigate the occurrence of intelligence failure, strategic surprise and the failure of deterrence. This book will be of much interest to students of intelligence studies, strategic studies, security studies and IR in general.

Security, Strategy and Military Change in the 21st Century Routledge

Among U.S. allies in the war against terrorism, Pakistan cannot be easily characterized as either friend or foe. Nuclear-armed Pakistan is an important center of radical Islamic ideas and groups. Since 9/11, the selective cooperation of president General Pervez Musharraf in sharing intelligence with the United States and apprehending al Qaeda members has led to the assumption that Pakistan might be ready to give up its longstanding ties with radical Islam. But Pakistan's status as an Islamic ideological state is closely linked with the Pakistani elite's worldview and the praetorian ambitions of its military. This book analyzes the origins of the relationships between Islamist groups and Pakistan's military, and explores the nation's quest for identity and security. Tracing how the military has sought U.S. support by making itself useful for concerns of the moment—while continuing to strengthen the mosque-military alliance within Pakistan—Haqqani offers an alternative view of political developments since the country's independence in 1947.

India's emergence as a confident and responsible nuclear nation has required careful crafting of its nuclear policies. After Pokhran II and the Chagai Hills tests, the South Asian security architecture and, with it, the whole matrix of nuclear diplomacy had undergone a paradigmatic shift. India's nuclear diplomacy too acquired a new prominence after these events. It was important for India to improve its bilateral relations with major powers for strategic reasons. At the same time, it needed to address the challenge of its burgeoning energy needs at home. "India's Nuclear Diplomacy After Pokhran II" presents an analytical, perspective-based and narrative exposition of the facts and issues involved in international nuclear gamesmanship, taking every care to maintain objectivity and balance. Flowing from years of intensive research and reflection, this book breaks new ground by focusing on India's nuclear diplomacy with the major global and regional powers, and the rationale of its stand vis-a-vis the NPT and CTBT. To reach out to the general reader, in addition to scholars of the subject, this book unravels the intricacies and technicalities of the post-Pokhran II diplomacy in lucid and comprehensible phraseology."

Is it possible for two combatants who possess equally strong air forces to conduct limited warfare by restraining air operations? In *Restraining Air Power*, Robert C. Owen and contributing

authors aim to answer this question by providing theoretical and empirical assessments of restrained air warfare through five historical case studies since 1945. Through an objective analysis of the past, this collection evaluates the principles of escalation and escalation management in conventional warfare scenarios to better understand when, why, and how peer opponents in past conflicts have expanded or restrained air operations. The surge in cyber warfare, the development of artificially intelligent weaponry, and the founding of the United States Space Force in 2019 mean that analysts and military planners must be prepared to think about escalation management and peer conflict in increasingly complicated and arduous ways. This comprehensive study provides readers with refined theoretical visions of the possibilities and challenges of managing escalation as a powerful mode of warfare between opponents who believe they must choose between sacrificing their own national interests or risking escalated destruction of their economies, military forces, and governing authority. The analysis within the pages of this volume updates our understanding of air warfare within a world of unprecedented military complexity and, as such, will hold immense value for specialists in advanced military studies as well as those studying international relations and history.

*The Politics of Nuclear Weapons in South Asia* NUS Press

The history of Pakistan's nuclear program is the history of Pakistan. Fascinated with the new nuclear science, the young nation's leaders launched a nuclear energy program in 1956 and consciously interwove nuclear developments into the broader narrative of Pakistani nationalism. Then, impelled first by the 1965 and 1971 India-Pakistan Wars, and more urgently by India's first nuclear weapon test in 1974, Pakistani senior officials tapped into the country's pool of young nuclear scientists and engineers and molded them into a motivated cadre committed to building the 'ultimate weapon.' The tenacity of this group and the central place of its mission in Pakistan's national identity allowed the program to outlast the perennial political crises of the next 20 years, culminating in the test of a nuclear device in 1998. Written by a 30-year professional in the Pakistani Army who played a senior role formulating and advocating Pakistan's security policy on nuclear and conventional arms control, this book tells the compelling story of how and why Pakistan's government, scientists, and military, persevered in the face of a wide array of obstacles to acquire nuclear weapons. It lays out the conditions that sparked the shift from a peaceful quest to acquire nuclear energy into a full-fledged weapons program, details how the nuclear program was organized, reveals the role played by outside powers in nuclear decisions, and explains how Pakistani scientists overcome the many technical hurdles they encountered. Thanks to General Khan's unique insider perspective, it unveils and unravels the fascinating and turbulent interplay of personalities and organizations that took place and reveals how international opposition to the program only made it an even more significant issue of national resolve.
