Rules for Distinguishing the Normal from the Pathological. As indicated in Book Three of The Division of Labor, however Durkheim felt that social facts exhibit both normal and pathological forms; and he now added that it was an important part of sociological method to provide rules for distinguishing between them. The primary objection to such a provision, of course, was that such judgments of ...

A mathematical proof is an inferential argument for a mathematical statement, showing that the stated assumptions logically guarantee the conclusion. The argument may use other previously established statements, such as theorems; but every proof can, in principle, be constructed using only certain basic or original assumptions known as axioms, along with the accepted rules of inference.

New Criticism. A literary movement that started in the late 1920s and 1930s and originated in reaction to traditional criticism that new critics saw as largely concerned with matters extraneous to the text, e.g., with the biography or psychology of the author or the work's relationship to literary history.

Linear Algebra and Its Applications. About the Textbook. Early introduction of key concepts: Fundamental ideas of linear algebra are introduced within the first seven lectures, in the concrete setting of  $\mathbb{R}^n$ , then gradually examined from different points of view. Later, generalizations of these concepts appear as natural extensions of familiar ideas.
