sugar. Plantains are higher in starch. Bananas are lower in carbohydrates and a bit higher in fiber, although fiber does not make up a significant amount of either's nutrients. Plantains are higher in calories, but not by too much. Both are rich in potassium and vitamins A and C.

Plantains vs Bananas: What's The Difference?

A widely used classification system for bananas and

plantains was developed by Simmonds and Shepherd (1955), which uses letters to represent the genetic contribution of the wild ancestral banana species *Musa acuminata* (A) and *Musa balbisiana* (B). In this system, bananas and plantains are classified into genome groups such as AA (i.e., *Analysis Of Plantain And Banana*). Plantains resemble green bananas, but when they ripen, they turn black and are used as a vegetable. Bananas have a thinner skin, and when ripe, they turn

yellow. Plantains have a thicker skin, natural brown spots, and rough areas. Fresh plantains have more vitamin C, vitamin A, and potassium than bananas.
