Piping arrangement, location of valves, nozzles, instruments, sample ports drains in the process plant are represented through Immersive training simulators. This technology allows the operator to evaluate the accessibility of critical process components over 2D or 3D viewer. This ITS gives the evaluator photo-realistic feel of a process plant.

The terms analysis and synthesis has been used interchangeably in design science to explain the design process. The terms analysis and synthesis was first used in ancient times in geometry as a problem-solving method with a well established process. Synthesis is a scheme to generate a possible way the product work.

Section III covers the synthesis of a chemical process. The minimum information required to simulate a process is given, as are the basics of using a process simulator. The choice of the appropriate thermodynamic model to use in a simulation is covered, and the choice of separation operations is covered.
