An understanding of acu-points is vital not only for acupuncturists but also for bodyworkers. This user-friendly manual contains current, comprehensive information for both groups, with special emphasis on how shiatsu and tuina therapists can best utilize “point knowledge” in their practice. Renowned experts Chris Jarney and Ilaira Bouratinos use succinct text, a well-organized framework, and detailed color anatomical illustrations to clarify the complexities of acu-points. In keeping with normal practice, the authors give the precise anatomical location of a point and illustrate it with a dot, along with alternative locations where

relevant. However, the book goes further by delineating the larger area where the point can be activated by pressure, gua sha, and other means. In addition, it explains the optimum physical position for treatment via acupuncture, acupressure, and other strategies, as treatment positions can vary according to the method of point stimulation. The book also documents the distribution of sensation resulting from point stimulation, and differentiates between pressure and needle application where appropriate. A Practical Guide to Acu-Points presents a wealth of carefully researched information equally valuable for professionals, students, and conscientious practitioners.

The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government's university funding authority to develop a School of Chinese Medicine to prepare students who will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.
