The endocrine system controls water equilibrium by regulating the solute concentration of the blood. Growth, metabolism, and tissue maturation. The endocrine system controls the growth of many tissues, like the bone and muscle , and the degree of metabolism of various tissues, which aids in the maintenance of the normal body temperature and normal mental functions.

The endocrine system produces hormones that are instrumental in maintaining homeostasis and regulating reproduction and development. A hormone is a chemical messenger produced by a cell that effects specific change in the cellular activity of other cells (target cells). Unlike exocrine glands (which produce substances such as saliva, milk, stomach acid, and digestive enzymes), endocrine glands do not secrete substances into ducts (tubes).
