This essential companion book to the bestselling Classic Human Anatomy provides artists and art students with a deeper understanding of human anatomy and different types of motion, inspiring more realistic and energetic figurative art. Fine-art instruction books do not usually focus on anatomy as it relates to movement, despite its great artistic significance. Written by a long-time expert on drawing and painting human anatomy, Classic Human Anatomy in Motion offers artists everything they need to realistically draw the human figure as it is affected by movement. Written in a friendly style, the book is illustrated with hundreds of life drawing studies (both quick poses and long studies), along with charts and diagrams showing the various anatomical and structural components. This comprehensive manual features 5 distinct sections, each focusing on a different aspect of the human figure: bones and joint movement, muscle groups, surface form and soft tissue characteristics, structure, and movement. Each chapter builds an artistic understanding of how motion transforms the human figure and can create a sense of expressive vibrancy in one's art.

Since it was first published in 1964, Professor Gottfried Bammes' Die Gestalt des Menschen has been considered the definitive book for artists learning to draw the human form. Deconstructing the body into its smallest components, Bammes asserts the importance of learning the structure of bones, muscles and parts in order to accurately draw a human figure. Whilst the original German has been sought after in the English speaking world, a translation has been long lamented. Now, for the first time, Bammes' most famous work has been translated by Search Press into the English language. Faithfully reproduced in translation, with over 540 original diagrams, drawings and photographs, and spanning over 500 pages, new and experienced artists can finally drink in the vast knowledge

lovingly presented by the late professor.

George Brant Bridgman (1865–1943) was a Canadian-American painter, writer, and teacher in the fields of anatomy and figure drawing. Bridgman taught anatomy for artists at the Art Students League of New York for some 45 years. Constructive Anatomy: Illustrated by George B. Bridgman. Excellent book of anatomical drawing instruction. Ideal for beginning to intermediate artists, begins with instruction on drawing hands and works its way through the human body giving detailed instruction on how to draw realistic human figures. The drawings that are presented here show the conceptions that have proved simplest and most effective in constructing the human figure. The eye in drawing must follow a line or a plane or a mass. In the process of drawing, this may become a moving line, or a moving plane, or a moving mass. The line, in actual construction, must come first; but as mental construction must precede physical, so the concept of mass must come first, that of plane second, that of line last. Masses of about the same size or proportion are conceived not as masses, but as one mass; those of different proportions, in respect to their movement, are conceived as wedging into each other, or as morticed or interlocking.
