Anatomy The Skeletal System Packet Answers

The skeletal system consists of bones and their associated

connective tissues, including cartilage, tendons and ligaments.

FUNCTIONS OF THE SKELETAL SYSTEM

Bone is made up of several different tissues working together: bone

or osseous tissue,

cartilage, dense

connective tissue,

epithelium, adipose

tissue and nervous

tissue. It is complex and dynamic living tissue.

The human skeleton, like that of other vertebrates, consists of two principal subdivisions, each with origins distinct from the others and each presenting certain individual features.

These are (1) the axial, comprising the vertebral column—the spine—and much of the skull, and (2) the appendicular, to which the pelvic (hip) and pectoral (shoulder) girdles and the bones and cartilages of the limbs belong.
