A mind-body approach to taking control of your physical and emotional health. Biofeedback is the process of training your body to control its involuntary

actions, such as breathing and heart rate. Minor changes to these actions can significantly improve physical and emotional well-being. In Biofeedback and Mindfulness in Everyday Life, Harvard Medical School faculty member Inna Khazan pairs biofeedback techniques with mindfulness practice to address some of life ' s most common ailments—from anxiety and fear to stress and insomnia. She begins with a description of basic physiological information, explaining concepts such as breathing and overbreathing. In

Part Two she dives into the practice of mindfulness. And in Part Three she zeroes in on applying this mind-body approach to an array of common problems. Khazan ' s approach outlines simple solutions for readers who want to improve the way they respond to challenges. She guides them through increasing their resilience and emotional flexibility while empowering them to take back control of their overall health. This is the starting point of this book, which describes a new model for scientific knowledge transfer called RIU, for Research, Integration and Utilization. This model sees the factors needed for knowledge transfer as being state-of-the-art research and the effective, practical utilization to which it leads, and it highlights the importance of “ integration ” , which in this context means the	active bi directional selection of those research results that are relevant for practice. In addition, the model underscores the importance of special allies who are powerful actors that support the application of scientific research results in society. An important product of this approach is a checklist of factors for successful knowledge transfer that will be useful for scientists. By using this checklist, research projects and research programs can be optimised with
