Tempest, that's what
I will describe my
professional life
spread over 40
years. Some say
being a woman is
some sort of curse.
No being a man is
also equally
difficult. All human*

beings will have to undergo the of grind. I remember someone telling " An elephant has it's own problem and an ant has it's own problem". Just to laugh at yourselves! Sri Ratan Tata once told students " Don't take anything seriously". I have no regrets about anything nor have animosity towards anyone. This book is a honest introspection of my experiences with Indian, multinational and family-managed businesses. The intention is to help all readers to prepare themselves to become leaders in the manufacturing industry. I learned a lot from these experiences and continue to learn. Someone had once told me when one door closes, another door opens. How right! I am thankful to all my Gurus of all age groups who guided me throughout the tempest.

As a new generation of African Americans completes college, an increasing number of students are aspiring to the Ph.D. as a stepping stone to a career in the academy and to fully participate in shaping our society. Most

African Americans are conscious that they are the first in their families to embark on this journey. They are aware they will meet barriers and prejudice, are likely to face isolation and frustration, and find few sources of support along the way. This book, by twenty-four Black scholars who “have been there,” offers a guide to aspiring doctoral students to the formal process and to the personal, emotional and intellectual challenges they are likely to face. The authors come from a wide range of disciplines – from computing, education and literature to science and sociology. Although their experiences and backgrounds are as varied as they are as individuals, their richly diverse chapters cohere into a rounded guide to the issues for those who

follow in their footsteps. From questioning the reader about his or her reasons for pursuing a doctorate, offering advice on financial issues, the choice of university and doctoral program, and relocation, through the process and timetable of application, interviews, acceptance and rejection, the authors go on to describe their own journeys and the lessons they have learned. These men and women write candidly about their experiences, the strategies they used to maintain their motivation, make the transition from HBCUs to PWIs, balance family and work, make the right choices and keep focussed on priorities. They discuss how to work effectively with advisors and mentors, make all-important connections with teachers

and build professional and personal support networks. They recount how they dealt with tokenism, established credibility, handled racism, maintained their values and culture, and persuaded supervisors to legitimize their research interests in African American issues. This is both an inspirational and practical book for every African American considering pursuit of a doctoral degree.

BORN TO DREAM Taylor & Francis

The book is made up of 21 chapters from 25 presentations at the 23rd MAVI conference in Essen, which featured Alan Schoenfeld as keynote speaker. Of major interest to MAVI participants is the relationship between teachers' professed beliefs and classroom practice. The first section is dedicated to classroom practices and beliefs regarding those practices, taking a look at prospective or practicing

teachers' views of different practices such as decision-making, the roles of explanations, problem-solving, patterning, and the use of play. The focus of the second section in this book deals with teacher change, which is notoriously difficult, even when the teachers themselves are interested in changing their practice. The third section of this book centers on the undercurrents of teaching and learning mathematics, what rises in various situations, causing tensions and inconsistencies. The last section of this book takes a look at emerging themes in affect-related research. In this section, papers discuss attitudes towards assessment.
