This book points out how pilgrimage studies rely on interdisciplinary academic interests, being always more determined by anthropological, social, cultural and economic factors. The volume gathers interdisciplinary contributions revealing different approaches and academic interests when researching pilgrimage. Finally, the proposal introduces a comparative international breath to reflect upon such complex phenomenon that since Antiquity still impregnates the history of human being across the world.

As pilgrimage studies are closely related to mobility issues, how the contemporary mobile world is altering and re-signifying pilgrimage dynamics and meanings will also be discussed in detail. The term "pilgrimage" evokes key concepts deriving from different fields, all of them collected in the final glossary. The primary audience of this work are academics and researchers from different fields involved in pilgrimage studies. The work may also be useful in teaching (advanced) university courses.

Social machines are a type of network connected by interactive digital devices made possible by the ubiquitous adoption of technologies such as the Internet, the smartphone, social media and the read/write World Wide Web, connecting people at scale to document situations, cooperate on tasks, exchange information, or even simply to play. Existing social processes may be scaled up, and new social processes enabled, to solve problems, augment reality, create new sources of value, and disrupt existing practice. This book considers what talents one would need to understand or build a social machine, describes the state of the art, and speculates on the future, from the perspective of the EPSRC project SOCIAM – The Theory and Practice of Social Machines. The aim is to develop a set of tools and techniques for investigating, constructing and facilitating social machines, to enable us to narrow down pragmatically what is becoming a wide space, by asking 'when will it be valuable to use these methods on a sociotechnical system?' The systems for which the use of these methods adds value are social machines in which there is

rich person-to-person communication, and where a large proportion of the machine's behaviour is constituted by human interaction.

From the intersection of citizenship, critical migration studies, and science and technology studies (STS), this book examines, across the various case studies, configurations between technologies, infrastructures and citizenship that may constrain acts of citizenship in migration and border regimes; constitute contestation and participation over citizenship; or enable and shape alternative acts of citizenship in migration and border regimes. Technologies and infrastructures on the border are designed to position migrants in multiple and potentially contradictory forms; migrants crossing the border, in their turn, may choose to challenge and repurpose those technologies and infrastructures to match their interests. By elaborating on the notion of 'material citizenship politics', the contributors provide a detailed analysis of socio-material practices on the border that moves beyond portraying migrants as mere victims of border technologies and migration infrastructures and anchors critique on the inside of those practices. The chapters in this volume hope to contribute to setting the research agenda and to stimulate further research along these lines revisiting the (in)visibilities of migrant subjects along technologies and infrastructures. As the current pandemic unfolds, exposing societal vulnerabilities, this book highlights the need to critically reflect on the establishment of existing technologies and infrastructures in order to examine to what extent those affect and shape migrant subjects in particular, but may also be extended and used on wider populations after being tested and normalized on vulnerable subjects. This book will be of interest to a broad readership across the social sciences, including scholars working in Critical Migration and Border Studies, Citizenship Studies, Critical Security Studies,

and Science and Technology Studies. The chapters in this book were originally published in the journal Citizenship Studies.

Geography science aims to observe the dynamics in describing earth's surface as a place and space for humans to carry out their lives, starting from simple identification using recording and sketching models, then utilizing tools such as maps, satellite imagery, statistics and Geographic Information Systems (GIS). In the development of geography science, it is appropriate to explain phenomena of the earth in the present context along with the process of developing science and technology using suitable and effective methods. Physical geography is the branch of natural science that deals with the study of processes and patterns in the natural environment such as the atmosphere, hydrosphere, lithosphere and biosphere. This book covers the methodology of the study for all aspects of physical geography, biosphere, hydrosphere, lithosphere, and atmosphere. A comprehensive geography textbook consists of a detailed research methodology for physical geography research including a few selected case studies in Asia. The uniqueness of this book is due to the contribution of several professors and subject experts from South East and East Asia with special particular reference to cases studies from a particular region. This book covered selected methodological approaches for hydrology, climatology and

geomorphology including the discovery of the best method for exploring and assessing mysterious physical phenomena using a diversity of methodologies. This book explains the principal concept, basic method, optional method, detailed description of each method, and the advantages and disadvantages of the various methods. The technique of data selection, data acquisition, method of analysis, data interpretation and data analysis techniques with a specific focus on deterministic modeling, geography techniques, geospatial modeling with Geographic Information System (GIS), Artificial Intelligence (AI), Analytic Hierarchy Process (AHP), and Automated machine techniques and combination of statistical analysis. This book attempts to explore different approaches, methodological possibilities and challenges in conducting geographical research in physical geography. New digital geographic data sources and GIS applications can help researchers to receive clearer concepts and obtain better measurements of the relevant attributes changes in the physical environment. Opportunity to critically examine the conceptualization and identification of the field in geographical research and how digital media has not only expanded the scope of what constitutes the field but has redefined the field in itself as well as the practices of observing, knowing, and analyzing the real world.

Learning Geography Beyond the Traditional Classroom SBPD Publications

Themes in Geographic Thought, first published in 1981, explores in breadth and depth the interrelationships among the history of Geography, geographic thought, and methodology, specifically focusing on the interactions between geographical research and various contemporary philosophical schools: positivism, pragmatism, functionalism, phenomenology, existentialism, idealism, realism and Marxism. An attempt is made to synthesise Geography 's historically rich tradition with the current diversity in approaches to the discipline, based on the belief that ' geographic thought ', at any point in time, is a manifestation of the mutual influence between the prevailing philosophical viewpoints and the major methodological approaches in vogue. Each chapter presents an overview of the concrete ideas of a particular school of philosophy and stresses its relevance and impact on various aspects of Geography.
