Theological reactions to the rise of the new

atheist movement have largely been critically hostile or defensively deployed apologetics to shore up the faith against attack. Gary Keogh contends that focusing on scholarly material that is inherently agreeable to theology will not suffice in the context of modern academia. Theology needs to test its boundaries and venture into dialogue with those with antithetical positions. Engaging Richard Dawkins, as the embodiment of such a position, illustrates how such dialogue may offer new perspectives on classical theological problems, such as the relationship of science and religion, the existence of God, creation, natural suffering and theodicy. Keogh demonstrates how a dialogical paradigm may take shape, rather than merely discussing it as a theoretical framework. A dialogue between such opposing hermeneutics may provide a new paradigm of theological scholarship - one which is up to the task of facing its critics in the public and pluralistic context of modern academia.

Academic Imperialism begins with Western education, which has not been seriously challenged in hard sciences. Colonialism changed the system of education as a key means of containing revolt, and stabilising Western rule. The change was possible (e.g. by Macaulay in India) just because a large section of the

colonised elite had already swallowed the racist beliefs of the 18th c. CE, that only the West had innovated in science. Those racist beliefs, in turn, were based on a bad history and philosophy of science violently distorted by the religious fanaticism which overwhelmed Europe from the Crusades in the 11th c. CE until the 17th c. CE. Therefore, to end academic imperialism it is necessary to take the following four steps: (a) Dismantle and expose the falsehoods of this Western history of science. (b) Change also the accompanying philosophy of science. (c) Use this to construct a new pedagogy, particularly in the hard sciences, and demonstrate its practical value, to dismantle the colonial education system. (d) Dismantle the Western power structure at the level of higher-education and research. The immediate action items relate to (c) and (d). An experiment is being carried out to test a new pedagogy of the calculus ("5-day course on calculus without limits") based on a new history and philosophy of mathematics, which enables the calculus to be taught very easily, with the help of computers, even to non-math students. (The calculus is at the base of hard science.) It is planned to start a new society and web-journal for Non-Western History and Philosophy of Science (NOWHAPS), which will not permit reliance on secondary Western sources so that

authors will have to assume that all such material is doubtful and untrustworthy.
