This book constitutes the refereed proceedings of the 22nd International Symposium on Practical Aspects of Declarative

Languages, PADL 2020, held in New Orleans, USA, in January 2020. The 10 full and 4 short papers were carefully reviewed and selected from 24 submissions. The papers present original work emphasizing novel applications and implementation techniques for all forms of declarative concepts, including programming with sets, functions, logic, and constraints. The papers are organized in the following topical headings: logical engines and applications; answer set programming systems; memory and real-time in functional programming; reasoning and efficient implementation; and small languages and implementation.

Computational Models of Mixed-Initiative Interaction John Wiley & Sons
This book gathers papers presented at the International Conference on Advanced Intelligent Systems for Sustainable Development (AI2SD-2018), which was held in Tangiers, Morocco on 12 – 14 July 2018. Highlighting the latest research and advances in the field of healthcare, it shares essential insights into the health sector, and is intended to stimulate further discussion and promote closer interdisciplinary collaboration among researchers and health professionals.

This easy-to-understand compliance guide explains the environmental regulatory requirements in practical terms that a company's

environmental manager, attorney, or consultant can apply directly to a business or to a facilities' day-to-day operations. Divided into three parts, it offers an overview of important federal and state environmental laws affecting business and industry; specific recording and recordkeeping requirements; procedures; compliance audits; and how to handle environmental inspections and procedures used by government regulators. Also included are practical tables and helpful checklists to summarize key points and provide quick reference guides to regulatory requirements.

This 8-volumes set constitutes the refereed of the 25th International Conference on Pattern Recognition Workshops, ICPR 2020, held virtually in Milan, Italy and rescheduled to January 10 - 11, 2021 due to Covid-19 pandemic. The 416 full papers presented in these 8 volumes were carefully reviewed and selected from about 700 submissions. The 46 workshops cover a wide range of areas including machine learning, pattern analysis, healthcare, human behavior, environment, surveillance, forensics and biometrics, robotics and egovision, cultural heritage and document analysis, retrieval, and women at ICPR2020.

Analysing Social Opposition to Reforms Springer Nature
Special features of this book include: practical "how to" instructions, state/federal regulations-plus overview, lab waste management, interpretations of regulations, enforcement, generator checklist, and complete coverage. This handbook is an excellent resource for hazardous waste managers, safety managers, lab managers, occupational health/safety workers, hazardous waste brokers, and small business managers. Disposal facilities, trade associations, consultants, administrators, attorneys, unions, and industrial hygienists will find this practical guide useful as well.

Data Analytics in Medicine: Concepts, Methodologies, Tools, and ApplicationsIGI Global
Official Gazette of the United States Patent and Trademark Office Princeton University Press

Advancements in data science have created opportunities to sort, manage, and analyze large amounts of data more effectively and efficiently. Applying these new technologies to the healthcare industry, which has vast quantities of patient and medical data and is increasingly becoming more data-reliant, is crucial for refining medical practices and patient care. Data Analytics in Medicine: Concepts, Methodologies, Tools, and Applications is a vital reference source that examines practical applications of healthcare analytics for improved patient care, resource allocation, and medical performance, as well as for diagnosing,

predicting, and identifying at-risk populations. Highlighting a range of topics such as data security and privacy, health informatics, and predictive analytics, this multi-volume book is ideally designed for doctors, hospital administrators, nurses, medical professionals, IT specialists, computer engineers, information technologists, biomedical engineers, data-processing specialists, healthcare practitioners, academicians, and researchers interested in current research on the connections between data analytics in the field of medicine.

Managing Your Environmental Responsibilities Springer Science & Business Media

Normal Accidents analyzes the social side of technological risk. Charles Perrow argues that the conventional engineering approach to ensuring safety--building in more warnings and safeguards--fails because systems complexity makes failures inevitable. He asserts that typical precautions, by adding to complexity, may help create new categories of accidents. (At Chernobyl, tests of a new safety system helped produce the meltdown and subsequent

fire.) By recognizing two dimensions of risk--complex versus linear interactions, and tight versus loose coupling--this book provides a powerful framework for analyzing risks and the organizations that insist we run them. The first edition fulfilled one reviewer's prediction that it "may mark the beginning of accident research." In the new afterword to this edition Perrow reviews the extensive work on the major accidents of the last fifteen years, including Bhopal, Chernobyl, and the Challenger disaster. The new postscript probes what the author considers to be the "quintessential 'Normal Accident'" of our time: the Y2K computer problem.

This book examines how market contexts shape the opposition of people to public sector reforms, with evidence from the Indian electricity sector. Based on a survey of 7,000 households in 14 Indian states and following a rational choice framework, it analyses the response of households to the prospect of privatization of electricity utilities.

Analysing Social Opposition to Reforms: The Electricity Sector in India discusses the possibility of

compensating losers and sequencing reform strategies. It uses empirical evidence from the Indian electricity sector to suggest that much of the opposition can be explained in terms of the (short term) losses due to reforms. The book uses insights gained from Indian data to discuss the likelihood of opposition to reforms in other public services and also to examine the performance of electricity reforms in other Asian countries. It is one of the few empirical studies on how gains and losses affect opposition/support to economic/institutional reforms globally and as such is a valuable contribution to development studies, political economy and governance. The book will be of great interest to development professionals, policy makers and researchers.

Build end-to-end industrial-strength NLP models using advanced morphological and syntactic features in spaCy to create real-world applications with ease Key FeaturesGain an overview of what spaCy offers for natural language processingLearn details of spaCy's features and how to use them effectivelyWork through practical recipes using spaCyBook Description spaCy is an industrial-grade, efficient NLP Python library. It offers various pre-trained models and ready-to-use features. Mastering spaCy provides you with end-to-end coverage of spaCy's features and real-world applications. You'll begin by installing spaCy and downloading models, before progressing to spaCy's features and

prototyping real-world NLP apps. Next, you'll get familiar with visualizing with spaCy's popular visualizer displaCy. The book also equips you with practical illustrations for pattern matching and helps you advance into the world of semantics with word vectors. Statistical information extraction methods are also explained in detail. Later, you'll cover an interactive business case study that shows you how to combine all spaCy features for creating a real-world NLP pipeline. You'll implement ML models such as sentiment analysis, intent recognition, and context resolution. The book further focuses on classification with popular frameworks such as TensorFlow's Keras API together with spaCy. You'll cover popular topics, including intent classification and sentiment analysis, and use them on popular datasets and interpret the classification results. By the end of this book, you'll be able

to confidently use spaCy, including its linguistic features, word vectors, and classifiers, to create your own NLP apps. What you will learnInstall spaCy, get started easily, and write your first Python scriptUnderstand core linguistic operations of spaCyDiscover how to combine rule-based components with spaCy statistical modelsBecome well-versed with named entity and keyword extractionBuild your own ML pipelines using spaCyApply all the knowledge you've gained to design a chatbot using spaCyWho this book is for This book is for data scientists and machine learners who want to excel in NLP as well as NLP developers who want to master spaCy and build applications with it. Language and speech professionals who want to get hands-on with Python and spaCy and software developers who want to quickly prototype applications with spaCy will also find this book helpful. Beginner-level

knowledge of the Python imagination—from a programming language is required to get the most out of this book. A beginner-level understanding of linguistics such as parsing, POS tags, and semantic similarity will also be useful.

An introduction to the LEGO Mindstorms Robot Inventor Kit through seven engaging projects. With its amazing assortment of bricks, motors, and smart sensors, the LEGO®

MINDSTORMS® Robot Inventor set opens the door to a physical-meets-digital world.

The LEGO MINDSTORMS Robot Inventor Activity Book expands that world into an entire universe of incredibly fun, uniquely interactive robotic creations! Using the Robot Inventor set and a device that can run the companion app, you'll learn how to build bots beyond your

magical monster that gobbles up paper and answers written questions, to a remote-controlled transformer car that you can drive, steer, and shape-shift into a walking humanoid robot at the press of a button. Author and MINDSTORMS master Daniele Benedettelli, a robotics expert, takes a project-based approach as he leads you through an increasingly sophisticated collection of his most captivating robot models, chapter by chapter. Each project features illustrated step-by-step building instructions, as well as detailed explanations on programming your robots through the MINDSTORMS App—no coding experience required. As you build and program an adorable pet turtle, an electric guitar that lets you shred out solos, a fully functional, whiz-bang pinball machine and more, you'll discover dozens of cool building and programming techniques to apply to

your own LEGO creations, from working with gears and motors, to smoothing out sensor measurement errors, storing data in variables and lists, and beyond. By the end of this book, you'll have all the tools, talent and inspiration you need to invent your own LEGO MINDSTORMS robots.

This is a print on demand edition of a hard to find publication. DoD relies overwhelmingly on commercial electrical power grids for secure, uninterrupted electrical power supplies to support its critical assets and is the single largest consumer of energy in the U.S. In 2008, it was reported that "[c]ritical national security and homeland defense missions are at an unacceptably high risk of extended outage from failure of the grid".

Commercial electrical power grids have become increasingly fragile and vulnerable to extended disruptions that could severely impact DoD's critical assets. This report addresses these issues and argues that with more detailed knowledge of the assets' risks and vulnerabilities to electrical power disruptions, DoD can better avoid compromising crucial DoD-wide missions during electrical power disruptions.

This book constitutes the proceedings of the 17th

European Conference on Logics in Artificial Intelligence, JELIA 2021, held as a virtual event, in May 2021. The 27 full papers and 3 short papers included in this volume were carefully reviewed and selected from 68 submissions. The accepted papers span a number of areas within Logics in AI, including: argumentation; belief revision; reasoning about actions, causality, and change; constraint satisfaction; description logics and ontological reasoning; non-classical logics; and logic programming (answer set programming).

Practical Aspects of Declarative Languages Springer Science & Business Media Computational Models of Mixed-Initiative Interaction brings together research that spans several disciplines related to artificial intelligence, including natural language processing, information retrieval, machine learning, planning, and computer-aided instruction, to account for the role that mixed

initiative plays in the design of intelligent systems. The ten contributions address the single issue of how control of an interaction should be managed when abilities needed to solve a problem are distributed among collaborating agents. Managing control of an interaction among humans and computers to gather and assemble knowledge and expertise is a major challenge that must be met to develop machines that effectively collaborate with humans. This is the first collection to specifically address this issue. Question Answering for the Curated Web Springer Nature This book presents important results from the ESPRIT Project 393 "Construction and Interrogation of Knowledge Bases Using Natural Language Text and Graphics" (ACORD). The project involved more than fifty people over five years, and included industrial and academic partners from three countries. The main result of the project is a highly sophisticated human-machine interface allowing the construction and interrogation of a common knowledge base

in English, French, and German, using both natural language and graphics. Chapter 1 presents an overview of the project. Chapters 2-4 develop specific issues concerning the grammar models used (functional grammars and unification categorial grammars). Chapter 5 discusses anaphora resolution and Chapter 6 text generation. Chapter 7 explains the integration of text and graphics, and Chapter 8 discusses the knowledge base module. The contributions are theoretically oriented and strongly concerned with generalization and the underlying background of potential further developments.
