Microeconomic evidence indicates a very high frequency of price adjustment in low income countries (LICs), raising the question of whether LICs may be reasonably characterized as exhibiting monetary neutrality. To address this question, we analyze a cross-country panel dataset of 79 LICs over the period 1990 to 2015 to assess the impact of external shocks on real GDP growth, and we find highly significant differences between LICs where the central bank targets monetary aggregates or inflation compared to LICs that maintain rigid nominal exchange rates. We also conduct an event study of the surprise devaluation of the Central African Franc (CFA) in January 1994 and find that it had highly significant effects on the output growth of 10 CFA countries relative to 18 similar countries outside the CFA zone. Consequently, the hypothesis of monetary neutrality is decisively rejected, and these findings provide strong support for the role of monetary policy frameworks in fostering price stability and macroeconomic stability in LICs.

Cell-based Therapies for Stroke: Promising Solution or Dead End? Springer Vieweg

The book provides a comprehensive overview of the latest econometric methods for studying the dynamics of macroeconomic and financial time series. It examines alternative methodological approaches and concepts, including quantile spectra and co-spectra, and explores topics such as non-linear and non-stationary behavior, stochastic volatility models, and the econometrics of commodity markets and globalization. Furthermore, it demonstrates the application of recent techniques in various fields: in the frequency domain, in the analysis of persistent dynamics, in the estimation of state space models and new classes of volatility models. The book is divided into two parts: The first part applies econometrics to the field of macroeconomics, discussing trend/cycle decomposition, growth analysis, monetary policy and international trade. The second part applies econometrics to a wide range of topics in financial economics, including price dynamics in equity, commodity and foreign exchange markets and portfolio analysis. The book is essential reading for scholars, students, and practitioners in government and financial institutions interested in applying recent econometric time series methods to financial and economic data.

Simple macroeconomic frameworks like the IS/LM have survived because they help us conceptualize complex problems while also providing 'back of the envelope' estimates of macroeconomic outcomes. Herein, a bare-bones New Keynesian extension of the IS/LM model yields solutions for core macro variables (output gap, inflation, interest rate, real exchange rate misvaluation)—expressed in percent. We then extend that standard model to also generate a corresponding set of demand-side elements—expressed in currency units. A key aim of the paper is to reconcile these two metrics in ways that also aid communication and intuition—including through IS/LM-style graphs.

History Alive! Pursuing American Ideals centers on the five founding ideals from the Declaration of Independence: equality, rights, liberty, opportunity, and democracy. Each generation has struggled with these ideals. Some have made little progress toward achieving them. Others have made great progress. This book invites students to become engaged in this

struggle, from establishing an American republic to the making of modern America. --Website. *The Costs of Macroprudential Deleveraging in a Liquidity Trap* International Monetary Fund The form of bounded rationality characterizing the representative agent is key in the choice of the optimal monetary policy regime. While inflation targeting prevails for myopia that distorts agents' inflation expectations, price level targeting emerges as the optimal policy under myopia regarding the output gap, revenue, or interest rate. To the extent that bygones are not bygones under price level targeting, rational inflation expectations is a minimal condition for optimality in a behavioral world. Instrument rules implementation of this optimal policy is shown to be infeasible, questioning the ability of simple rules à la Taylor (1993) to assist the conduct of monetary policy. Bounded rationality is not necessarily associated with welfare losses.

Energy Transition Metals CRC Press

The energy transition requires substantial amounts of metals such as copper, nickel, cobalt and lithium. Are these metals a key bottleneck? We identify metal-specific demand shocks, estimate supply elasticities and pin down the price impact of the energy transition in a structural scenario analysis. Metal prices would reach historical peaks for an unprecedented, sustained period in a net-zero emissions scenario. The total value of metals production would rise more than four-fold for the period 2021 to 2040, rivaling the total value of crude oil production. Metals are a potentially important input into integrated assessments models of climate change.

This book gathers the proceedings of the 7th International Conference, with the theme "Culture and Tourism in a Smart, Globalized and Sustainable World," held on Hydra Island, Greece, on June 17–19, 2020, published with the support of the International Association of Cultural and Digital Tourism. Highlighting the contributions made by numerous writers to the advancement of tourism research, this book presents a critical academic discourse on sustainable practices in the smart tourism context, improving readers' understanding of, and stimulating future debates in, this critical area. In addition to the knowledge economy and the concept of smart destinations, the book addresses new modes of tourism management and development, as well as emerging technologies, including location-based services, the Internet of things, smart cities, mobile services, gamification, digital collections and the virtual visitor, social media, social networking, and augmented reality.

The Divine Comedy 1: Hell International Monetary Fund

"Inferno" tells the story "of those who have rejected spiritual values", of those who are lost and are unable to find the right way to salvation. It describes each sin and the corresponding punishment. It differentiates between Purgatory and Hell by presenting people begging for forgiveness and others willing to justify their sins. "Inferno" represents the Christian soul who gets to see what it really is to commit a sin and what is to be expected in the afterlife. "Inferno" is the first part of Dante Alighieri's medieval poem "The Divine Comedy" which was written in the period 1308-1320. It depicts the nine circles of Hell and Dante's journey through them. Dante Alighieri was an Italian poet, philosopher, language and political theorist, born in Florence in 1265. He is one of the best known poets of the Middle Ages and his masterpiece "The Divine Comedy" is considered to be a representative of the medieval world-view. "The Divine Comedy" and "The New life" were written in vernacular, i.e. the speech variety that was used in everyday life. This made the literature accessible to most people and this is mainly why Dante is called "The father of Italian language". Dante's life was divided by poetry and politics and the relationships between secular and religious authority were topics which were often depicted in his literary works.

We show that an increase in aggregate uncertainty—measured by stock market volatility—reduces productivity growth more in industries that depend heavily on external finance. This effect is larger during recessions, when financing constraints are more likely to be binding, than during expansions. Our statistical method—a difference-in-difference approach using productivity growth for 25 industries for 18 advanced economies over the period 1985-2010—mitigates concerns with omitted variable bias and reverse causality. The results are robust to the inclusion of other sources of interaction effects, such as financial development (Rajan and Zingales, 1998) and counter-cyclical fiscal policy (Aghion et al., 2014). The results also hold if economic policy uncertainty (Baker et al., 2015) is used instead of stock market volatility as the measure of aggregate uncertainty.

Do Monetary Policy Frameworks Matter in Low Income Countries? Simon and Schuster

Six days after an InStyle-worthy wedding in Los Angeles, Lisa Fineberg Cook left behind her little red Jetta, her manicurist of ten years, and her very best friend for the land of the rising sun. When her husband accepted a job teaching English in Nagoya, Japan, she imagined exotic weekend getaways, fine sushi dinners, and sake sojourns with glamorous expatriate friends. Instead, she's the only Jewish girl on public transportation, and everyone is staring. Lisa longs for regular mani/pedis, valet parking, and gimlets with her girlfriends, but for the next year, she learns to cook, clean, commute, and shop like the Japanese, all the while adjusting to another foreign concept -- marriage. Loneliness and frustration give way to new and unexpected friendships, the evolution of old ones, and a fresh understanding of what it means to feel different -- until finally a world she never thought she'd fit into begins to feel home-like, if not exactly like home.
