Following a spate of high-profile financial scandals (including Enron, WorldCom, and Parmalat), the quality of financial information has come under increasing scrutiny. Many of the accounting standards being imposed on the profession by regulators and standard-setting bodies are now attracting criticism from the business community and the accountancy profession itself. In this book, Anthony Rayman traces a fundamental flaw in the conventional academic wisdom back to the nineteenth century, and proposes an alternative conceptual framework. He argues that effective corporate governance can be achieved, not by expensive and counterproductive regulations (like the US Sarbanes-Oxley Act and some International Accounting Standards), but by an enhanced accounting information system that exposes corporate management to the full rigour of market forces.

This book was written to fill a need for a text which will enable the reader/student to learn the principles of valuation. It will help you to meet the demanding requirements of export and import valuation. Customs and Border Protection expect 99% valuation compliance. Bureau of Industry and Security as well as Bureau of Census expect accuracy in export and import valuation. The Bureau of Industry and Security states that over 50% of export declarations are incorrect. This book will help to reduce valuation as a value concern. Valuation is far below the 99% stated to Congress. Under the "reasonable care" requirements of Customs, trained and proficient personnel are expected to provide accuracy of 99%. This book will help attain a higher compliance level and serve as support to your compliance manual.
