Intro to Oceanography & Ecology Parent Lesson Plan Bushra Arshad Biology Biology Quick Study Guide & Workbook Bushra Arshad Molecular Biology Multiple Choice Questions and Answers (MCQs) Master Books Basic Pre-Med Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Microbiology As the world waits in fear, world health organizations race to develop a vaccine for the looming bird flu epidemic—a threat that has forced international, federal, and local governments to begin planning for a possible pandemic, and the widespread death and devastation which would follow. Will the world find an answer in time? Or will we see this threat ravage populations as others have before in 1918 with influenza in the late 18th century with yellow fever, or the horrific “black death” or bubonic plague in 1347 AD? “Are these [viruses] examples of evolution? --Did God make microbes by mistake? Are they accidents of evolution, out of the primordial soup?” These timely questions are examined throughout The Genesis of Germs. It seems that a new and more terrible disease is touted on the news almost daily. The spread of these scary diseases from bird flu to SARS

to AIDS is a cause for concern and leads to questions such as: Where did all these germs come from, and how do they fit into a biblical world view? What kind of function did these microbes have before the Fall? Does antibiotic resistance in bacteria prove evolution? How can something so small have such a huge, deadly impact on the world around us? Professor Alan Gillen sheds light on these and many other questions in this revealing and detailed book. He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view. Dr. Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ. Semester 2: Life Science Study clear biological answers for how science and Scripture fit together to honor the Creator. Have you ever wondered about such captivating topics as genetics, the roll of natural selection, embryonic development, or DNA and the magnificent origins of life? Within Building Blocks in Life Science you will discover exceptional insights and clarity to patterns of order in living things, including the promise of healing and new birth in Christ. Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years. The

evolutionary worldview can be found filtered through every topic at every age-level in our society. It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions. This dynamic education resource helps young people not only learn science from a biblical perspective, but also helps them know how to defend their faith in the process.

Concepts of Medicine and
Biology Course Description
This is the suggested course
sequence that allows one core
area of science to be studied
per semester. You can change
the sequence of the semesters
per the needs or interests of
your student; materials for
each semester are independent
of one another to allow
flexibility. Semester 1:
Medicine From surgery to

Quality of life has improved
dramatically in the last few
decades alone, and the future is
bright. But students must not
forget that God provided
humans with minds and
resources to bring about these
advances. A biblical
perspective of healing and the
use of medicine provides the
best foundation for treating
diseases and injury. In
Exploring the History of

men and women who used
their abilities to better mankind
and give glory to God. The
fascinating history of medicine
comes alive in this book,
providing students with a
healthy dose of facts, mini-
biographies, and vintage
illustrations. Semester 2:
Biology The field of biology
focuses on living things, from
the smallest microscopic
protozoa to the largest

mammal. In this book you will
read and explore the life of
plants, insects, spiders and
other arachnids, life in water,
reptiles, birds, and mammals,
highlighting God's amazing
creation. You will learn about
biological classification, how
seeds spread around the world,
long-term storage of energy,
how biologists learned how the
stomach digested food, the
plant that gave George de
Mestral the idea of Velcro, and
so much more. For most of
history, biologists used the
visible appearance of plants or
animals to classify them. They
grouped plants or animals with
similar-looking features into
families. Starting in the 1990's,
biologists have extracted DNA
and RNA from cells as a guide
to how plants or animals should
be grouped. Like visual
structures, these reveal the
underlying design of creation.
Exploring the World of Biology
is a fascinating look at life-from
the smallest proteins and
spores, to the complex life
systems of humans and
animals.

Survey of Science History &
Concepts Course Description
Students will study four areas
of science: Scientific
Mathematics, Physics,
Biology, and Chemistry.
Students will gain an
appreciation for how each
subject has affected our lives
and for the people God
revealed wisdom to as they
sought to understand
Creation. Each content area
is thoroughly explored,
giving students a good
foundation in each discipline.
Semester 1: Math and
Physics Numbers surround
us. Just try to make it through
a day without using any. It's
impossible: telephone
numbers, calendars, volume
settings, shoe sizes, speed

limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in *Exploring the World of Mathematics*. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia firsthand during fun and informative experiments.

Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, arachnids, aquatic life, reptiles, birds, and mammals, all highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990s, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. *Exploring the World of Biology* is a

fascinating look at life — from the smallest proteins and spores to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it or even give it much thought. Without chemistry, there would be nothing made of plastic, and there would be no rubber tires, no tin cans, no televisions, no microwave ovens, and no wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. *Exploring the World of Chemistry* brings science to life and is a wonderful learning tool with many illustrations and biographical information.
