The present volume investigates the legacy of Gottlob Frege, Bertrand Russell and Ludwig Wittgenstein in contemporary philosophy of language and linguistics. These philosophers inspired both the development of analytic philosophy and various philosophical approaches to the study of language. They have influenced technical discussions on truth, proper names, definite descriptions, propositions and predication, sense and reference, truth, and philosophical and linguistic inquiries into the relations between language, mind and the world. The studies gathered in this volume discuss most of these issues and aim to show that the results of this research are still of utmost importance, and that the three philosophers have significantly contributed to the linguistic turn in philosophy and the philosophical turn in the study of language. The volume includes contributions by: Joachim Adler (Zurich), Maria Cerezo (Murcia), Pawel Grabarczyk (Lodz), Arkadiusz Gutt (Lublin), Tom Hughes (Durham), Gabriele Mras (Vienna), Carl Humphries (Cracow), Gary Kemp (Glasgow), Siu-Fan Lee (Hong Kong), Jaroslav Peregrin (Prague), Ulrich Reichard (Durham), Piotr Stalmaszczyk (Lodz), Piotr Szalek (Lublin), Mieszko Talasiewicz (Warsaw).

## An introduction to semantics and pragmatics. Second corrected and slightly revised edition Walter de Gruyter

This volume critically examines the phenomenon of “English fever” in South Korea from both micro- and macro-perspectives. Drawing on original research and rich illustrative examples, the book investigates two key questions: why is English so popular in Korea, and why is there such a gap between the ‘dreams’ and ‘realities’ associated with English in Korea? These questions are explored through the eyes of English-Korean translators and interpreters, who represent the professional group most intensely engaged in the zeal for English language mastery. Macro-perspectives focus on historical factors leading to the rise of English, with English-Korean translation and interpreting as a key theme. Micro-perspectives explore the dreams that individuals attach to English and the ways in which they imagine it can transform their lives, and contrast these dreams with the stark realities felt on the ground. The gaps between these dreams and realities are explored from various angles, which include commodification, gender and neoliberalism. The book thus offers fresh insights on how the phenomenon of “English fever” has been created, reproduced, and sustained from both historical and contemporary viewpoints. From the reviews: This is an important study of how English is experienced in one country, Korea. A very insightful analysis of the interlocking of historical factors influencing the status of English, and the interlocking significance of class, gender, aesthetics, myth-making, and the role of the media and competitive commodification. The study is based on competent use of relevant theoretical approaches, solid fieldwork, and a personal capacity to draw complex threads together. It demonstrates how language policy can be analysed in a stimulating way that has major importance beyond the borders of Korea. Language ideologies are brought to life effectively.

Linguistic theory since the Cognitive Revolution has followed one of the premises of that revolution by largely sidelining the issue of emotions and concentrating on those aspects of language that are more strictly cognitive. However, during the last ten years research in cognitive science, especially in neuropsychology, has begun to fill in the gaps left by the exclusion of emotions from cognitive research. The work of those like Oatley, Zajonc, Damasio, and LeDoux, to name a few, has demonstrated both that it is possible to construct models of how emotions play into the workings of the psyche and that they are necessary in giving us a balanced view of the human mind. *Language, Feeling, and the Brain* attempts to apply the fruits of this new research in emotion to our understanding of language itself. Building on Karl Pribram's integrated model of emotions and motivations, the book takes an eclectic approach to explaining how emotions contribute to the nature of language, drawing on research done in neuropsychology, philosophy, cognitive linguistics, anthropology, and related fields. Its aim is to construct a propositional model for how the emotions may have contributed to the emergence of symbolic formation, most especially in the forms of gesture and speech, and how identifying that emotional influence sheds new light on everything we have had to say about language itself, from lexis and grammar to culture and literature.

This volume contains 23 papers selected from those presented at the 22nd Linguistic Symposium on Romance Languages. The papers address issues in phonology, morphology, syntax/semantics from contemporary theoretical perspectives. In addition, in keeping with the symposium's US-Mexico location and commemoration of

the twin quincentenaries of Columbus' first voyage and the publication of Nebrija's grammar, several papers focus on the history of linguistic theory, language contact, variation, and change.

David Crystal's classic *English as a Global Language* considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However, Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language.

This accessible textbook is the only introduction to linguistics in which each chapter is written by an expert who teaches courses on that topic, ensuring balanced and uniformly excellent coverage of the full range of modern linguistics. Assuming no prior knowledge the text offers a clear introduction to the traditional topics of structural linguistics (theories of sound, form, meaning, and language change), and in addition provides full coverage of contextual linguistics, including separate chapters on discourse, dialect variation, language and culture, and the politics of language. There are also up-to-date separate chapters on language and the brain, computational linguistics, writing, child language acquisition, and second-language learning. The breadth of the textbook makes it ideal for introductory courses on language and linguistics offered by departments of English, sociology, anthropology, and communications, as well as by linguistics departments.

This book provides an introduction to the study of meaning in human language, from a linguistic perspective. It covers a fairly broad range of topics, including lexical semantics, compositional semantics, and pragmatics. The chapters are organized into six units: (1) Foundational concepts; (2) Word meanings; (3) Implicature (including indirect speech acts); (4) Compositional semantics; (5) Modals, conditionals, and causation; (6) Tense & aspect. Most of the chapters include exercises which can be used for class discussion and/or homework assignments, and each chapter contains references for additional reading on the topics covered. As the title indicates, this book is truly an INTRODUCTION: it provides a solid foundation which will prepare students to take more advanced and specialized courses in semantics and/or pragmatics. It is also intended as a reference for fieldworkers doing primary research on under-documented languages, to help them write grammatical descriptions that deal carefully and clearly with semantic issues. The approach adopted here is largely descriptive and non-formal (or, in some places, semi-formal), although some basic logical notation is introduced. The book is written at level which should be appropriate for advanced undergraduate or beginning graduate students. It presupposes some previous coursework in linguistics, but does not presuppose any background in formal logic or set theory. *Language, Feeling, and the Brain* Cambridge University Press

Discussing contemporary perspectives and new developments in the field of English language studies has gained ascendancy in view of the fact that such concerns about learning and teaching English make important contributions to society. Such discussions are of critical importance in today's globalised societies and more needs to be done towards collaboratively presenting the growing wealth of quality research in linguistics and literature.

Linguists and scholars continue to champion the need to interrogate the discourse of literary and language texts using a number of critical frameworks that help sensitise readers to the ideological nature of literary discourse and the ways in which certain dominant ideas of nation, race, ethnicity and gender are ratified or challenged. Readers need to be constantly challenged to think, interpret and evaluate differing views and perspectives. The collection of chapters in this book explores contemporary issues and perspectives in linguistics and literature among educators and researchers whose primary focus is to examine the manner in which English is used for various educational purposes from traditional curriculum demands to answering broader questions about human knowledge, global citizenship and social engagement.

Interpreting the Past and Present Cambridge University Press

This volume brings together a selection of 20 out of altogether 170 papers presented at the 13th International Conference on the History of the Language Sciences (ICHoLS XIII), held at the University of Trás-os-Montes and Alto Douro in Vila Real, Portugal, 25 – 29 August 2014. It is divided chronologically into four parts, ranging from classical antiquity to the end of the 20th century. Part I deals with general and theoretical topics in the history of linguistics in the United States, in Brazil, and the fields of lexicography and the relation of gesture to thought and language. Part II examines aspects of ancient Greek and Latin grammars, the concept of interjection from antiquity to humanism, and the classification of the parts of speech in the classical Sanskrit grammars. Part III focuses on 16th-century Latin-Portuguese grammaticography, the importance of 17th-century plurilingual textbooks, as well as two papers dedicated to French idéologues and their participation in late 18th-century prize competitions. Part IV is devoted to the works of 19th to late 20th-century European grammarians, philosophers, logicians and linguists, as well as some 19th-century Chilean grammarians and lexicographers of the Spanish language.

An Introduction Springer

The revolution in linguistic thought associated with the name of Professor Noam Chomsky centres on the theory of transformational generation, especially in grammar. This book subjects the main theory and some of its applications to a searching critique. It finds the theory in some places circular, in general descriptively inadequate, but above all aprioristic and dangerously unempirical. Professor Derwing writes as a linguist particularly interested in the psychology of language acquisition, and conscious that the TGG model starts from assumptions about the mind and linguistic universals which dictate the form and the consequences of the argument. They strike Professor Derwing as arbitrary and merely formal, and as contradicting basic scientific mental habits. In brief, Professor Derwing disputes that TGG exemplifies proper empirical scientific inquiry; that something like a TGG is part of the output of normal language acquisition; or that TGG provides a valid heuristic for psychological investigation. He argues therefore for a more experimental approach if we are actually to discover how language is acquired.

The Legacy of Frege, Russell, and Wittgenstein Multilingual Matters

Ke's book examines and reflects on English education in Taiwan from a global English perspective, starting with a discussion on globalization and global Englishes. English education in Taiwan has gone through various major transformations since the intensification of globalization after the 1990s. On one hand, children start to learn English ever earlier while on the other hand, the curriculum and materials in the vocational schools and at the tertiary level become diversified to meet various specific needs of English use. Internationalization of education has brought increasing numbers of international students, and the roles of English in Taiwan are changing constantly with the dynamic environment, from a foreign language to a lingua franca, medium of instruction, and an international language. In his book, the author documents the historical development of education and the roles of English in Taiwan before reviewing curriculum reforms and changes in the past half century. He then presents teachers' and students' perceptions on global Englishes. He proposes global Englishes pedagogies and his views on what changes can be made to textbooks, learning materials, entrance exams, translation, and the linguistic environment. Practical suggestions to English education in Taiwan in the globalizing context serve as tentative conclusion for the book. Offering insights into English education and its relationship with globalization, Ke's book will be useful to researchers and students in the fields of global Englishes and English education as well as offering practical pedagogical suggestions for English educators around the world.

The Evocative Vector Teach Yourself

Why should we study language? How do the ways in which we communicate define our identities? And how is this all changing in the digital world? Since 1993, many have turned to Language, Culture, and Society for answers to questions like those above because of its comprehensive coverage of all critical aspects of linguistic anthropology. This seventh edition carries on the legacy while addressing some of the newer pressing and exciting challenges of the 21st century, such as issues of language and power, language ideology, and linguistic diasporas. Chapters on gender, race, and class also examine how language helps create - and is created by - identity. New to this edition are enhanced and updated pedagogical features, such as learning objectives, updated resources for continued learning, and the inclusion of a glossary. There is also an expanded discussion of communication online and of social media outlets and how that universe is changing how we interact. The discussion on race and ethnicity has also been expanded to include Latin- and Asian-American English vernacular.
