Irrespective of theoretical orientation, families matter. Families are the entity in which children are introduced to words, objects, shapes, and colors. Families are the people related in a myriad of conventional and unconventional ways that clothe, bathe, and feed its biological and acquired offspring. Influenced by race, ethnicity, income, and education, families relate not only to each other within the unit but to

others in the neighborhood, the community, and beyond. This book is about families and their children. This book is about those times when the family unit experiences distress. This distress may be found in the serious illness of a child or a parent. It may be the result of a reconfiguration of the family as in divorce and remarriage. Or it may involve the harming of a family member sexually or physically. In this volume, the authors explore what family means today, what functions it serves, and those circumstances that can make family life painful. Importantly, the authors provide readers with clearly written information drawn from the most recent scientific investigations suggesting how the topics in this volume might be addressed to either ease that discomfort (treatment) or prevent its occurrence.

Behavior Modification is a comprehensive, practical presentation of the principles of behavior modification and guidelines for their application. It introduces forms of behavior modification ranging from helping children learn necessary life skills, to training pets, to solving personal behavior problems. It teaches practical “how-to” skills, including discerning long-term effects; designing, implementing, and evaluating behavioral programs; interpreting behavioral episodes; observing and recording behaviors; and recognizing instances of reinforcement, extinction, and punishment. The material is presented in an engaging, readable format that assumes no prior knowledge of behavior modification or psychology. What is the value of a bricks-and-mortar store? As retailers move to a multichannel world where the winners must overcome the challenges of pricing transparency, personalized marketing, and supply chain controls, most sales still occur in the physical site. Behavior Analytics is the science of studying the behavior of people. Schedule to Demand is a subset of Behavior Analytics, a method that correlates between traffic, sales and labor data, in order to optimize the productivity of employees and position them where they matter most. In Behavior Analytics for Retail, we will introduce the core metrics of Schedule to Demand; design the requirements for a Customer Service Model of the store, inside the store, and at the checkout; present technology options and accuracy requirements; and offer insights through case studies. Regardless of how the future will shape retail, the physical store will continue to exist, and thrive. We propose a framework for retailers, and others, on how to optimize store operations and profitability, and enhance the shopping experience by measuring, monitoring and predicting the behavior of employees and

customers.
