Phagocytosis—Past and Future is a collection of contributions by investigators who met in the Province of Messina, Sicily, in October 1980 to discuss the functions of phagocytic leukocytes in the host-parasite relationship. The topics discussed are largely in the areas of cell biology, cellular immunology, and biochemistry. They ranged from aspects of cellular movement and the ingestion process per se, to definition of substances that affect the function of phagocytic leukocytes and the nature of cidal mechanisms at the molecular level. This volume is organized into six sections encompassing 33 chapters and begins with an overview of Ilya Ilich Metchnikoff's life as well as his scientific contributions, particularly in the area of bacteriology and his research on mesodermal amoeboid cells. The next chapters focus on the mechanism of phagocytosis, with reference to aspects of cell membrane, cell movement, and ingestion. The reader is methodically introduced to the biochemical aspects of phagocytosis, from molecular modulations to energetics, oxygen radicals, and enzymes. The discussion then shifts to macrophages, their function in antigen recognition, receptor-mediated endocytosis in macrophage cell hybrids, and the role of phagocytosis in macrophage activation. The remaining chapters examine the cidal mechanisms of phagocytic leukocytes and aspects of inflammation. This book will be of interest to scientists and researchers in fields such as biology, biochemistry, immunology, pathology, pharmacology, and physiology.

From energy and water resources to natural disasters, and from changing climatic patterns to the evolution of the Earth's deep interior, geoscience research affects people's lives in many ways and on many levels. This book offers a stimulating cross-disciplinary perspective on the important relationship between geoscience research and outreach activities for schools and for the general public. The contributors – academics, research scientists, science educators and outreach program educators – describe and evaluate outreach programs from around the world. A section entitled Field-based Approaches includes a chapter describing an initiative to engage Alaskan communities and students in research, and another on problem-based learning in the field setting. The Online Approaches section discusses ways to connect students and scientists using online forums; use of the web and social media, including the United Nations University and its experience with the design of a web magazine featuring geoscience research; and video clips on marine geoscience created by students and scientists. The section on Workshop and Laboratory-based Approaches includes a chapter on teaching geochronology to high school students, and another describing an extracurricular school activity program on meteorology. The Program Design section presents chapters on Integrating Geoscience Research in Primary and Secondary Education, on ways to bridge research with science education at the high school level, and on use of online geoscience data from the Great Lakes. The concluding section, Promoting Research-enhanced Outreach, offers chapters on Geoscience Outreach Education with the local community by a leading research-intensive university, and on the use of research to promote action in Earth science professional development for schoolteachers. Geoscience Research

and Outreach: Schools and Public Engagement will benefit geoscience researchers who wish to promote their work beyond academia. It offers guidance to those seeking research funding from agencies, which increasingly request detailed plans for outreach activities in research proposals. Policymakers, educators and scientists working in museums, learned societies and public organizations who wish to widen participation will also find this book useful. Together with the companion volume Geoscience Research and Education: Teaching at Universities, this book showcases the key role that geoscience research plays in a wide spectrum of educational settings.

Practical resources designed to help language educators apply

the latest research and most effective pedagogical methods to classroom pronunciation instruction In Second Language Pronunciation: Bridging the Gap Between Research and Teaching, a team of distinguished researchers and educators delivers an incisive and practical approach to evidence-based pronunciation instruction in second language classrooms. Developed for language teachers who want to incorporate and implement the most effective pedagogical methods in their language instruction, this edited volume offers 15 essays that connect the latest research with practical applications in the classroom. In addition to exploring recent but less well-known methods—like High Variability Phonetic Training, discourse-based teaching, communicative classrooms, and technology-based methods—these chapters are unified in bringing theory to bear on practical questions faced by language teachers. The chapters follow a standard format, moving from critical research issues to pedagogical implications, and practical resources to equip language teachers, scholars, administrators, and teachers-in-training with the tools they require to develop their students’ pronunciation abilities. Readers will also find: A thorough introduction to using empirical evidence to guide pronunciation instruction in second language students Comprehensive explorations of the integration of pronunciation instruction into second language education Practical discussions of perception training in pronunciation instruction and the importance of L2 segmental and suprasegmental contrasts in pronunciation learning In-depth examinations of classroom research for pronunciation and the use of technology to explore L2 pronunciation Perfect for upper-level undergraduate and graduate students studying TESOL, applied linguistics, and second language acquisition, Second Language Pronunciation: Bridging the Gap Between Research and Teaching will also earn a place in the libraries of researchers, scholars, and teachers of language and education.
