Chapter material was updated to include recent developments in U.S. trade policy, major changes in the European Union, progress in the transition from command to market economies, and special issues related to developing nations. Sixteen countries across the world — including the United States and many European nations — have fallen into economic crises since the late 1990s. In *The Limits of Fiscal, Monetary, and Trade Policies: International Comparisons and Solutions*, Jonathan E Leightner convincingly argues that the fundamental cause of the global malaise is a surplus of savings. He provides compelling evidence (via statistical estimates) that fiscal, monetary, and trade policies cannot solve the resulting problems since their effectiveness has plummeted. Leightner also shows that the solution to the current global economic woes is a “consumption driven growth model” (which China advocates but has yet to fully implement) because when there is insufficient consumption, excess savings will remain idle, seek a return from rent or deception, or fund speculative bubbles.

Latest Edition: *International Economics: Global Markets and Competition* (4th Edition) This text integrates the microeconomics of trade with concepts from open economy macroeconomics. The emphasis is on the powerful forces of international competition and the limitations of government policy. Economics began with a political debate over tariffs and the politics continue. Domestic industries lobby for protection against foreign competitors and for export subsidies.

Government policy makers favor their pet industries in return for lobby money and votes. Meanwhile, other industries lobby for free trade. Governments worldwide tentatively negotiate free trade agreements while international financial markets determine the effectiveness of their fiscal and monetary policies. Wages, capital returns, and national income rise and fall with international commerce. The text covers these issues of international trade and finance. The trade theory is based on partial equilibrium market analysis, constant cost and neoclassical general equilibrium, the factor proportions model, and various theories of industrial organization. The text fully integrates concepts from international finance, and a new chapter for the 2nd edition develops the basic models of open economy macroeconomics. The presentation is centered on graphs that use realistic numerical examples making the theory easier for students to grasp, especially when combined with general algebraic and graphic presentations in the classroom. The text does not assume previous courses in intermediate

theory or calculus but the theory is completely developed. Numerous exercises that can be presented by students give them confidence in using the theoretical models and concepts. Over 250 boxed examples illustrate the theory, many with visually descriptive charts and plots, making the text excellent for MBA courses. The text is concise in its presentation style. Students enjoy its clear straightforward style and instructors notice the difference on exams.

The essays in Part I, "Trade, Tariffs, and Welfare," concern the roles of tangible and human capital in the determination of trade patterns, the joint determination of demand conditions and trade patterns, the gains from international trade, and the effects of migration on economic welfare. Part II, "International Monetary Theory and Policy," contains essays on the theory of gold-exchange standard, the determination of forward exchange rates, the demand for international reserves, economic integration and the delineation of currency areas, and the process of balance of payments adjustment under pegged and floating exchange rates. The essays in Part III, "Monetary Reform and the Dollar," are arranged in chronological order, from 1963 through 1977, and focus on the problems and progress of international monetary reform and on the functioning of the present international monetary system.
