Moving a patient from one healthcare provider or setting to another—a transition of care—increases the risk of medication errors due to inadequate communication and poor coordination of care. While guideline- and evidence-based therapy is important, pharmacists must also address other patient-specific needs and possible barriers to safety, efficacy, and adherence of therapies. Providing a deep dive into this critical topic, *Transitions of Care in Pharmacy Casebook* explains how to deliver and optimize complex patient care during transitions between care settings. This essential resource features 100 enlightening clinical cases that illustrate real-

world practices. The answer includes a detailed discussion on each topic, providing practical advice on how to deal with the challenges that occur when prescribing, including planning, drug calculations, prescription review and adverse drug reactions. The book will be invaluable during clinical placements and is an ideal companion during preparation for the

Prescribing Safety Assessment examination. Making speedy and appropriate clinical decisions, and choosing the best course of action to take as a result, is one of the most important and challenging parts of training to become a doctor. Co-occurring Mental Illness and Substance Use Disorders McGraw-Hill Medical Publishing

The *Addiction Casebook* presents 12 patients with DSM-5 addiction diagnoses -- plus one experiencing problematic Internet use -- and illustrates practical and successful

strategies for diagnosing and treating these patients. The book's cases are analogous to those that clinicians commonly encounter in their everyday practice and effectively demonstrate the intersection of addiction with other psychiatric diagnoses. The experience and clinical wisdom of three generations of addiction specialists are distilled into a single volume that includes the most salient ideas and treatment suggestions for clinicians. This informative, practical volume strikes a colloquial, and sometimes humorous, tone. General psychiatrists and

psychiatric residents seeking to gain expertise in and an understanding of addiction will find it a delight to read, as will a diverse audience of family practitioners, internists, pediatricians, medical students, allied professionals, and anyone interested in sharpening her or his clinical skills. The book is the first to cover the diagnosis, assessment, and treatment of substance use disorders and other addictions within the DSM-5® framework. Its many valuable and helpful features include An outline of the progression in thinking about psychiatric diagnoses with the move from DSM-IV-TR® to DSM-5®. Descriptions of hands-on experience with the current diagnosis and treatment of substance use disorders and other addictions that complement substance abuse textbooks and bring the material to life. Coverage of such subject areas as alcohol, caffeine, cannabis, hallucinogen, inhalant, opioid, sedative, hypnotic, anxiolytic, stimulant, tobacco, gambling, and Internet addictions. Key points and multiple-answer questions at the end of each chapter that highlight the chapter's most pertinent

takeaways and apply and strengthen readers' knowledge of chapter information. Extensive use of tables, figures, charts, and other instructive materials to illuminate and clarify addiction concepts. In their preface, the authors assert their hope that the book "will provide the fundamental tools for working with the substance-using patient in the hospital, the clinic, and the community." The Addiction Casebook exceeds its goal by providing mental health and other medical practitioners with timely, current strategies for addiction diagnosis and treatment in a succinct, engaging, and entertaining volume.
