Challenges and Opportunities for the United States UCANR Publications

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Skin Tissue Models provides a translational link for biomedical researchers on the interdisciplinary approaches to skin regeneration. As the skin is the largest organ in the body, engineered substitutes have critical medical application to patients with disease and injury – from burn wounds and surgical scars, to vitiligo, psoriasis and even plastic surgery. This volume offers readers preliminary description of the normal structure and function of mammalian skin, exposure to clinical problems and disease, coverage of potential therapeutic molecules and testing, skin substitutes, models as study platforms of skin biology and emerging technologies. The editors have created a table of contents which frames the relevance of skin tissue models for researchers as platforms to study skin biology and therapeutic approaches for different skin diseases, for clinicians as tissue substitutes, and for cosmetic and pharmaceutical industries as alternative test substrates that can replace animal models. Offers descriptions of the normal structure/function of mammalian skin, exposure to clinical problems, and more Presents coverage of skin diseases (cancer, genodermatoses, vitiligo and psoriasis) that extends to clinical requirements and skin diseases in vitro models Addresses legal requirements and ethical concerns in drugs and cosmetics in vitro testing Edited and authored by internationally renowned group of researchers, presenting the broadest coverage possible

"Make sure your students follow your instructions." That sounds like a straightforward instruction, but in fact, it's fairly abstract. What does a teacher actually have to do to make sure students are following? Even the leader delivering this direction may not know, and the first-year teacher almost certainly doesn't. The vast majority of teachers are only observed one or two times per year on average—and even among those who are observed, scarcely any are given feedback as to how they could improve. The bottom line is clear: teachers do not need to be evaluated so much as they need to be developed and coached. In *Get Better Faster: A 90-Day Plan for Coaching New Teachers*, Paul Bambrick-Santoyo shares instructive tools of how school leaders can effectively guide new teachers to success. Over the course of the book, we break down the most critical actions leaders and teachers must enact to achieve exemplary results. Designed for coaches as well as beginning teachers, *Get Better Faster* is an integral coaching tool for any school leader eager to help their teachers succeed. It's the book's focus on the actionable—the practice-able—that drives effective coaching. By practicing the concrete actions and micro-skills listed here, teachers will markedly improve their ability to lead a class, producing a steady chain reaction of future teaching success. Though focused heavily on the first 90 days of teacher development, it's possible to implement this work at any time. New and old teachers alike can benefit from the guidance of *Get Better Faster* and close their existing instructional gaps. Packed with practical training tools, including agendas, presentation slides, a coach's guide, handouts, planning templates, and 35 video clips of real teachers at work, *Get Better Faster* will teach you: The core principles of coaching: Go Granular, Make Feedback More Frequent, Top action steps to launch a teacher's development in an easy-to-read scope and sequence guide The four

CSIS scholars examine how Asia as region is responding to the nontraditional and transboundary security threats of climate change and natural disasters, and what it means for the evolution of regional institutions to meet future challenges. The assessment looks broadly at two areas of nontraditional security cooperation in Asia: (1) climate change, including both the domestic political factors in Asia and the regional strategies for securing low-carbon pathways in anticipation of coordinated efforts to ameliorate climate change; and (2) regional approaches to disaster management. The volume concludes with an inventory of the structures for joint action in Asia and draws on case studies to assess the utility of existing and emerging institutions as the United States and the region seek greater cooperation on traditional and nontraditional security challenges. Although Asia lacks, and is not likely to develop, a single umbrella organization such as the EU or NATO, the study concludes that the region's patchwork of overlapping institutions can work to address problems in response to local environmental hazards and natural disasters but also to other security threats. Responses are effective when there is consensus on common threats and interests and when individual governments are willing to take on responsibility for forging collective action. Looking ahead, particularly with respect to U.S. policy, we believe that U.S. role will continue to be critical in supporting the region's response to many of the natural disasters it will face. At the same time, the United States should seek to focus Asia's attention increasingly on the long-term threat of climate change and other slow-onset disasters. As the authors demonstrate, not only is the region expected to be a major victim of the consequences of climate change, but it is also a source of the threat itself. If the twenty-first century is the Asian century, how the United States conducts itself as an Asian power will say much about its status as the critical actor in global affairs. The success of the United States in engaging with regional institutions will say much about how Asian states view the United States and its contribution to regional peace and stability. Overestimating the breadth and reach of the emerging regional architecture would be unwise. Underestimating the role of regional institutions, however, has the potential to unseat the United States in its status as the guarantor of Asia's security. This volume presents at least one effort to estimate the limits and aspirations of Asia's evolving regional architecture in a real-world context.

The project "Emergency response and support to vulnerable populations in at-risk areas of Burkina Faso" is financed by the Swedish International Development Agency. FAO implemented the project in partnership with the Government of Burkina Faso through the Ministry for Agriculture, Hydro-agricultural Development and Mechanisation. The project seeks to improve vulnerable populations' access to food and to means of food production. This first phase of the evaluation focused on suggesting improvements to the project over the rest of its implementation period, and more particularly improvements as pertaining to relevance, efficiency and efficacy of the project. The implementation of these recommendations should allow the project and more generally FAO, the FAO Office in Burkina Faso and the Government, to close a project that has achieved its objectives

The sophistication of modelling and simulation technologies have improved dramatically over the past decade and their applications in toxicity prediction and risk assessment are of critical importance. The integration of predictive toxicology approaches will become increasingly necessary as industrial chemicals advance and as new pharmaceuticals enter the market. In this comprehensive discussion of predictive toxicology and its applications, leading experts express their views on the technologies currently available and the potential for future developments. The book covers a wide range of topics including in silico, in vitro and in vivo approaches that are being used in the safety assessment of chemical substances. It reflects the growing and urgent need to strengthen and improve our ability to predict the safety and risks posed by industrial and pharmaceutical chemicals in humans. The reader will find extensive information on the use of current animal models used for various toxicities and target mediated toxicities. Also discussed are the recent regulatory initiatives to improve the safety assessment of chemicals. The book provides an expert and comprehensive discussion on the current status and future directions of predictive toxicology and its application. The various chapters in the book also reflect the growing need for improvements in our technologies and abilities to predict toxicities of pharmaceutical and industrial chemicals to ensure product safety and protect public health.
