A fascinating deep dive on innovation from the New York Times bestselling author of *How We Got To Now* and *Unexpected Life*. The printing press, the pencil, the flush toilet, the battery--these are all great ideas. But where do they come from? What kind of environment breeds them? What sparks the flash of brilliance? How do we generate the breakthrough technologies that push forward our lives, our society, our culture? Steven Johnson's answers are revelatory as he identifies the seven key patterns behind genuine innovation, and traces them across time and disciplines. From Darwin and Freud to the halls of Google and Apple, Johnson investigates the innovation hubs throughout modern time and pulls out the approaches and commonalities that seem to appear at moments of originality.

*Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

**Biology for NGSS.** Houghton Mifflin Harcourt

UCLA graduate student Christina Gonzalez wanted to use biotechnology to free America from its dependence on Middle Eastern oil. Instead, an act of eco-terrorism unleashes her genetically-modified bacteria into the fuel supply of Los Angeles, making petroleum useless. With the city paralyzed and slipping toward anarchy, Christina must find a way to rein in the microscopic monster she created. But not everyone wants to cure the petroplague--and some will do whatever it takes to spread it. From the La Brea Tar Pits to university laboratories to the wilds of the Angeles National Forest, Christina and her cousin River struggle against enemies seen and unseen to stop the infection before it's too late.

Hailed by reviewers and readers for its originality, vitality, and truth, this novel secured Willa Cather a place in the first rank of American writers. Cather called My Ántonia "the best thing I've done." For Oliver Wendell Holmes, My Ántonia had "unfailing charm, perhaps not to be defined; a beautiful tenderness, a vivifying imagination that transforms but does not distort or exaggerate." H. L. Mencken declared it "one of the best [novels] any American has ever done." Cather drew deeply on her childhood days in frontier Nebraska for this, her fourth novel, published in 1918. Old immigrant neighbors inspired many of the characters, particularly the heroine. Ántonia Shimerda is memorable as the warmhearted daughter of Bohemians who must adapt to a hard life on the desolate prairie. She survives and matures, a pioneer woman made radiant by spirit. W. T. Benda's illustrations further illuminate the fiction of a writer who drew so extensively on actual experience.

To view sample chapters and more information visit [www.whfreeman.com/SABiologyPreview](http://www.whfreeman.com/SABiologyPreview) All of us involved in science education understand the importance of scientific literacy. How do we get the attention of a nonscientist? And if we can get it, how do we keep it - not only for the duration of the course or the chapter in a textbook but beyond? How do we convey in our courses and our textbooks not just what we know but also how science is done? These are the challenges we hope to address with our new series of textbooks specifically for the nonscientist. With this series, W. H. Freeman and Scientific American join forces not just to engage nonscientists but to equip them critical life tools.

Flightsend is Charlie's new home, whether she likes it or not. Her mother sees it as an end to all that's gone so tragically wrong, but for Charlie it's the end of her family, not to mention her social life. They had been a proper family. Mum, Sean and Charlie, with a new baby sister on the way. But the baby died before she was born and everything changed. Gradually, her mother pushed Sean away, before resigning from her job and selling the house, forcing Sean to find somewhere else to live. Although Charlie believes her mother is making a terrible mistake, she can only offer support - but who will support Charlie, with Sean cut out of their lives? She's certain that the move to a ramshackle cottage, miles from anywhere, can only make things worse. She couldn't be more wrong. This first summer at Flightsend proves to be a turning point for them both. For Charlie's mum there's a new business and the fresh start that she knew she needed. And for Charlie there's a new job, new friends, a newly discovered talent for art and new feelings for two very different men. It's a summer of beginnings, not ends; a summer that Charlie will never forget.

Advances in computer science and technology and in biology over the last several years have opened up the possibility for computing to help answer fundamental questions in biology and for biology to help with new approaches to computing. Making the most of the research opportunities at the interface of computing and biology requires the active participation of people from both fields. While past attempts have been made in this direction, circumstances today appear to be much more favorable for progress. To help take advantage of these opportunities, this study was requested of the NRC by the National Science Foundation, the Department of Defense, the National Institutes of Health, and the Department of Energy. The report provides the basis for establishing cross-disciplinary collaboration between biology and computing including an analysis of potential impediments and strategies for overcoming them. The report also presents a wealth of examples that should encourage students in the biological sciences to look for ways to enable them to be more effective users of computing in their studies.

The Pennsylvania Keystone Biology Exam Vocabulary Workbook is an awesome tool to use before a course of study as it will help you develop a strong working Insider's Language before you even begin your review. Learn the Secret to Success! After nearly 20 years of teaching Lewis Morris discovered a startling fact: Most

students didn't struggle with the subject, they struggled with the language. It was never about brains or ability. His students simply didn't have the knowledge of the specific language needed to succeed.

Through experimentation and research, he discovered that for any subject there was a list of essential words, that, when mastered, unlocked a student's ability to progress in the subject. Lewis called this set of vocabulary the "Insider's Words". When he applied these "Insider's Words" the results were incredible. His students began to learn with ease. He was on his way to developing the landmark series of workbooks and applications to teach this "Insider's Language" to students around the world.
