“ Offers a useful reminder of the role of modern science in fundamentally transforming all of our lives. ” —President Barack Obama (on Twitter) “ An important book. ” —Steven Pinker, The New York Times Book Review Now also a PBS documentary series: the surprising story of how humans gained

what amounts to an extra life, from the bestselling author of *How We Got to Now* and *Where Good Ideas Come From*. As a species we have doubled our life expectancy in just one hundred years. All the advances of modern life—the medical breakthroughs, the public health institutions, the rising standards of living—have given us each about twenty thousand extra days on average. There are few measures of human progress more astonishing than our increased longevity. This book is Steven Johnson's attempt to understand where that progress came from. How many of those extra twenty thousand days came from vaccines, or the decrease in famines, or seatbelts? What are the forces that now keep us alive longer? Behind each breakthrough lies an inspiring story of cooperative innovation, of brilliant thinkers bolstered by strong systems of public support and collaborative networks. But it is not enough simply to remind ourselves that progress is possible. How do we avoid decreases in life expectancy as our public health systems face unprecedented challenges? What current technologies or interventions that could reduce the impact of future crises are we somehow ignoring? A study in how meaningful change happens in society, *Extra Life* is an ode to the enduring power of common goals and public resources. The most fundamental progress we have experienced over the past few centuries has not come from big corporations or start-ups. It has come, instead, from activists struggling for reform; from university-based and publicly funded scientists sharing their findings open-source-style; and from nonprofit agencies spreading new innovations around the world.

In this collection of essays, the sophistication and vibrancy of contemporary phenomenological research is documented, including both its engagement with key figures in the history of philosophy, and with critical problems defining future directions of philosophical investigations. It honors the writings of Richard Cobb-Stevens, whose work in phenomenological philosophy, analytic philosophy and the history of philosophy has served as model for generations of philosophers working between these three fields of research. The essays collected in this volume provide a unique window on the contemporary state of the art in phenomenological philosophy by leading scholars of international reputation from North America and Europe.

Historical figures such as Aristotle and Hobbes are innovatively brought into dialogue with phenomenological thinking. Phenomenological thinking is brought to bear on a wide variety of problems, from the nature of artworks and photography to questions concerning consciousness and knowledge.

Among the topics discussed in these specially commissioned essays: phenomenology and Aristotle; the nature of the primal ego; Hobbes and Husserl; intentionality and reference; Neo-Aristotelian ethics; Husserl and Wittgenstein; photography; the nature of artworks.
