Laboratory Tests and Diagnostic Procedures
Prentice Hall

The purpose of this book is to help nurses, midwives and health professionals to better understand how the work of clinical laboratories contributes to patient care. It answers the following questions: Why is this test being ordered on my patient? What sort of sample is

required? How is that sample obtained? And most importantly: What is the significance of the test result for my patient? Retaining its accessible and user-friendly style, the aim of this book remains the same: to provide nurses with as much relevant information as possible about the most commonly requested laboratory tests. This is not a book about laboratory technique - its focus is on the clinical significance of test results, and therefore the patient. The third edition is more comprehensive in terms of the number of tests discussed, incorporates colour to aid the accessibility, and includes more paediatric content.

This manual has proved to be especially popular for introductory

biology labs emphasizing a molecular-cellular approach. The 12 exercises are ideal for the quarter length or semester program and are adaptable for use with most textbooks. Designed for majors and non-majors, the manual begins with the fundamentals. For students with little or no background, the first two exercises focus on developing laboratory skills. Exercises are consistently organized: theory relates lab experiences with concepts presented in lecture; objectives summarize skills and concepts to be mastered; materials and equipment needed for the exercise are an aid for instructors; procedures are described step-by-step; and detachable lab reports are provided for hand-ins. All exercises have been thoroughly class-tested. The manual is self-contained and adaptable for use with most textbooks. Highlights include numerous illustrations, many with color added for clarity; an appendix on the metric system for hand student reference; and 16 pages of extra graph paper. A plus for instructors is the appendix with

instructions for preparing solutions, reagents, and materials needed. An answer key for lab reports is available on adoption.
