Problem-based learning (PBL) has excited interest among educators around the world for several decades. Among the most notable applications of PBL is the approach taken at the Faculty of Health, Medicine and Life sciences (FHML) at Maastricht University, the Netherlands. Starting in 1974 as a medical school, the faculty embarked on the innovative pathway of problem-based learning, trying to establish a medical training program which applied recent insights of education which would be better adapted to the needs of the modern physician. The medical school, currently part of the FHML, can be considered as an 'established' school, where original innovations and educational changes have become part of a routine. The first book to bring this wealth of information together, *Lessons from Problem-based Learning* documents those findings and shares the experiences of those involved, to encourage further debate and refinement of problem-based learning in specific applications elsewhere and in general educational discussion and thought. Each chapter provides a description of why and what has been done in the Maastricht program, followed by reflection on the benefits and issues that have arisen for these developments. The final section of the book examines the application of PBL in the future, and how it is likely to develop further.

This resource provides the answers to assignments students complete in 70 Times 7 Math: Geometry Classwork/Homework for Middle and High School Students, which is sold separately and supplements the textbook Geometry Textbook for Middle and High School Students, by 70 Times 7 Math. The assignments are meant to provide students individual practice solving problems taught in their textbooks and to equip them to do well on the corresponding tests. There are four classwork assignments to help prepare students for each exam. (Computer-based tests and practice tests are available through the Habakkuk Educational Materials website. See pages 5-6 for details. The classwork/homework assignments that this book provides the answers to can also be purchased from the website.) Students should complete one of the assignments weekly and then take the test at the end of the fifth week. For homework the 5th week, they can correct any errors from previous assignments. It is recommended that students be allowed to correct any errors from a homework assignment before the final grade is calculated, as this tends to help them to do better on the tests. (When using the computer-based tests and practice tests, the grades are calculated automatically.) Each week's classwork will be in the same format as the test. If there are, let's say, 100 problems on an upcoming test, students would complete all 100 of those types of problems each week for four weeks, although the answers to corresponding problems will differ from one week to the next. Questions included on the classwork and tests are not randomly selected from the chapters in focus. Instead, they are very comprehensive in that every type of problem students learn about in their textbook or complete as a class on the interactive whiteboard will also be solved individually by students on the classwork assignments and corresponding tests. Moreover, page numbers where students can turn to for help in their textbooks are specified on the footnotes of each page, and tutorial videos are available in the electronic textbooks.
