For a variety of reasons, there has been an explosion of interest in research on aging over the past few years. The reasons include an awareness that a large and growing proportion of our population is over 65 and that research findings can contribute to their health, satisfaction, and efficiency as members of society; the fact that funding agencies have endorsed the need for more research effort in the area by

---

setting up special programs; and also the fact that researchers themselves are turning more to practical problems as many theoretical issues (in experimental psychology at least) seem to remain as intractable as ever. Thus, at present there is widespread interest in aging, but there is also a lack of knowledge as to what has already been accomplished in the area, what the theoretical issues are, and what factors contribute to the methodological and practical difficulties. The time is propitious for meetings of experts in various aspects of the aging process, both to discuss among themselves latest advances in the field and also to integrate known information for researchers and practitioners. In the summer of 1980 we organized such a meeting as the 10th annual psychology symposium to be held at the Erindale Campus of the University of Toronto. The topic chosen was Aging and Cognitive Processes, and the edited contributions to the symposium form the chapters of the present book.

Nielsen Media Research serving as the corporate sponsor, the Encyclopedia of Survey Research Methods presents state-of-the-art information and methodological examples from the field of survey research. Although there are other "how-to" guides and references texts on survey research, none is as comprehensive as this Encyclopedia, and none presents the material in such a focused and approachable manner. With more than 600 entries, this resource uses a Total Survey Error perspective that considers all aspects of possible survey error from a cost-benefit standpoint.

The revised and updated second edition of *Qualitative Analysis for Planning & Policy* is a roadmap to help planners access qualitative data and integrate it into their planning investigations. Planning and policy decisions are not based solely on numbers, and this book equips planners with a how-to guide to see what has been missing "between the lines" of quantitative data and make good decisions using the best possible information. Each chapter offers step-

by-step instruction on how to set up and enact diverse types of qualitative research, and case studies demonstrate how qualitative research techniques can be combined with quantitative methods to tackle complex real-world projects. For over a decade *Qualitative Analysis for Planning & Policy* has been an indispensable resource for students and researchers, experienced and novice planners. The revised second edition offers myriad tools to help twenty-first-century planners make intelligent decisions, including new qualitative research techniques, technological innovations, and contemporary case studies.

Despite the obvious importance of eyewitness information in criminal investigation, police receive surprisingly little instruction on how to conduct an effective interview with a cooperative eyewitness. More than half of police departments have no formal training whatsoever for newly appointed

investigators. Most texts in police science either completely omit the issue of effective interviewing techniques or provide only superficial coverage. This manual provides guiding principles to effective interviewing, with specific techniques to be used and others to be avoided. There are principles of memory retrieval so that the reader will understand why to employ specific techniques -- for example, when to use open-ended versus direct short-answer questions, effective use of pauses, asking follow-up questions, cues to name and number recall, etc. There is the strategy of interview sequential structure -- that is, what to probe for at the beginning, middle, and end of the interview. Also included are practical exercises and real-world experiences. The book will also be helpful for attorneys in conducting investigative interviews.

Teaching children with Autism Spectrum Disorder (ASD) to develop the 'inner voice' needed to solve problems, this book's innovative approach will help children reach logical and appropriate solutions to everyday problems. This book shows

students and professionals how to formally teach key skills for reasoning and problem-solving that aren't usually explicitly taught, such as planning, pausing and reflecting and increasing emotional regulation. Focusing on the 'inner voice' - the dialogue that goes on inside our heads during every day routines - the authors explain how to help children with ASD solve problems independently. The book also shows how children can learn to cope with feelings of stress when confronted with difficult situations, whether getting stuck on homework, making mistakes, choosing options, following procedures that are perceived to be arbitrary, or everyday social situations. Examples of implementing this new approach in different situations are given to show the many ways of teaching these cognitive skills to children with autism. Jessica Kingsley Publishers

The amount of information available for any realistic complex situation is likely to overwhelm most users, as well as stymie any designer tasked with presenting the information. Providing large amounts of information in a coherent and usable format remains an unresolved problem. Choosing, structuring, formatting, and displaying information to allow easy access and to facilitate understanding are critical issues for effective design. To build an effective design that addresses complex information needs, one must look at research from psychology, sociology, human computer interaction, and technical communication, and develop a complete picture of the situation. This book develops a foundation for analysis and design of the approaches to providing complex information in real-world situations. Author Michael Albers takes the view that the content of the information

system is the most important component. As such, this volume presents the analysis that needs to be done before the interface is designed and before content is created. It strives to provide clear understanding of how the user thinks and what the user needs, so interface operation, content, and presentation can maximize their respective potentials in communicating with a user. This volume is intended for technical communicators, human-computer interaction designers, and information designers. It will also be useful for system designers and researchers, and those studying adaptive hypertext and related topics.
