Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call

for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think,

---

and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in

sophistication as students progress through grades K-12. Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and

what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards

---

makes the case that they promote are a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning

essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

A radical approach to growing high-quality talent--fast You

know that winning in today's marketplace requires top-quality talent. You also know what it takes to build that talent--and you spend significant financial and human resources to make it happen. Yet somehow, your company's beautifully designed and we'll-benchmarked processes don't translate into the bottom-line talent depth you need. Why? Talent management experts Marc Effron and Miriam Ort argue

---

that companies unwittingly add layers of complexity to their talent-building models--without evaluating whether those components add any value to the overall process. Consequently, simple activities like setting employee performance goals become multipage, headache-inducing time wasters that turn managers off and fail to improve results. Effron and Ort introduce a simple, powerful, scientifically proven approach to increase your ability to develop better leaders faster: One Page Talent Management (OPTM). Using the straightforward, easy-to-follow process described in this book, you will eliminate frustrating complexity, focus only on those components that add real value, and build transparency and accountability into every practice. Based on extensive research and experience in companies such as Avon Products, Bank of America, and Philips, One Page Talent Management shows you how to: Quickly identify high-potential talent without complex assessments Increase the number of "ready now" successors for key roles Generate 360-degree feedback that accelerates change in the most critical behaviors Significantly reduce the time required for managers to

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of

young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for

Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes

---

recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when

they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge

base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

There's a reason Alison Green has been called "the Dear Abby of the work world." Ten years as a workplace-advice columnist have taught her that people avoid awkward conversations in the office because they simply don't know what to say. Thankfully,

Green does—and in this incredibly helpful book, she tackles the tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit "reply all" • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's

and Get Your Financial Life Together *Speaking in a Second Language* World Bank Publications Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. *Science Teaching Reconsidered* provides undergraduate science educators with a path to understanding students, accommodating their individual

differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers

suggestions for having a greater impact in the classroom and provides resources for further research. *THE GREAT GATSBY* Simon and Schuster The acclaimed New York Times and Wall Street Journal bestseller from Robert Cialdini—"the foremost expert on effective persuasion" (Harvard Business Review)—explains how it's not necessarily the message itself that changes minds, but the key moment before you deliver that message. What separates effective communicators from truly

---

successful persuaders? With the same rigorous scientific research and accessibility that made his *Influence* an iconic bestseller, Robert Cialdini explains how to prepare people to be receptive to a message before they experience it. Optimal persuasion is achieved only through optimal persuasion. In other words, to change “minds” a persuader must also change “states of mind.” Named a “Best Business Books of 2016” by the Financial Times, and “compelling” by The Wall Street Journal, Cialdini’s *Pre-Suasion* draws on his extensive experience as the most cited social

psychologist of our time and explains the techniques a person should implement to become a master persuader. Altering a listener’s attitudes, beliefs, or experiences isn’t necessary, says Cialdini—all that’s required is for a communicator to redirect the audience’s focus of attention before a relevant action. From studies on advertising imagery to treating opiate addiction, from the annual letters of Berkshire Hathaway to the annals of history, Cialdini outlines the specific techniques you can use on online marketing campaigns and even effective wartime

propaganda. He illustrates how the artful diversion of attention leads to successful persuasion and gets your targeted audience primed and ready to say, “Yes.” His book is “an essential tool for anyone serious about science based business strategies...and is destined to be an instant classic. It belongs on the shelf of anyone in business, from the CEO to the newest salesperson” (Forbes).
