A hidden history of the South emerges when a worldly teacher leads Threestep, GA, to reinvent itself, setting in motion events that lead to triumph and tragedy for the black teenager who happens to be the smartest person in Piedmont County, Georgia, in 1938 – 39. As an epigraph from The Souls of Black Folk by W. E. B. Du Bois reminds us at the start of this novel, "Throughout history, the powers of single black men flash here and there like falling stars, and die sometimes before the world has rightly gauged their brightness." Protagonist Theo Boykin is a genius, an artist, an inventor, a Leonardo DaVinci – type, whose talents are sought after by local blacks and whites alike, but even this is not enough to save him. He falls victim to "the tragedy of ignorance and the damage caused by fear," in the words of poet Rita Dove—the first African American to serve as U.S. Poet Laureate and a member of the jury that conferred on The Cailiffs of Baghdad, Georgia the 2011 Anisfield-Wolf Award for books that "make a significant contribution to our understanding of racism and our appreciation for the diversity of human cultures." You won't forget Theo Boykin, nor will you forget his friends the Cailiffs, especially Gladys, who tells this story with love and bewilderment, and the teacher, Miss Spivey, who changes all their lives.

Winner of the Mathematics Association of America's 2021 Euler Book Prize, this is an inclusive vision of mathematics—its beauty, its humanity, and its power to build virtues that help us all flourish “ This is perhaps the most important mathematics book of our time. Francis Su shows mathematics is an experience of the mind and, most important, of the heart. ” —James Tanton, Global Math Project"A good book is an entertaining read. A great book holds up a mirror that allows us to more clearly see ourselves and the world we live in. Francis Su ’ s Mathematics for Human Flourishing is both a good book and a great book."—MAA Reviews For mathematician Francis Su, a society without mathematical affection is like a city without concerts, parks, or museums. To miss out on mathematics is to live without experiencing some of humanity ’ s most beautiful ideas.In this profound book, written for a wide audience but especially for those disenchanted by their past experiences, an award winning mathematician and educator weaves parables, puzzles, and personal reflections to show how mathematics meets basic human desires—such as for play, beauty, freedom, justice, and love—and cultivates virtues essential for human flourishing. These desires and virtues, and the stories told here, reveal how mathematics is intimately tied to being human. Some lessons emerge from those who have struggled, including philosopher Simone Weil, whose own mathematical contributions were overshadowed by her brother ’ s, and Christopher Jackson, who discovered mathematics as an inmate in a federal prison. Christopher ’ s letters to the author appear throughout the book and show how this intellectual pursuit can—and must—be open to all.

Walking his two young children to school every morning, Thad Carhart passes an unassuming little storefront in his Paris neighborhood. Intrigued by its simple sign—Desforges Pianos—he enters, only to have his way barred by the shop’s imperious owner. Unable to stifle his curiosity, he finally lands the proper introduction, and a world previously hidden is brought into view. Luc, the atelier’s master, proves an indispensable guide to the history and art of the piano. Intertwined with the story of a musical friendship are reflections on how pianos work, their glorious history, and stories of the people who care for them, from amateur pianists to the craftsmen who make the mechanism sing. The Piano Shop on the Left Bank is at once a beguiling portrait of a Paris not found on any map and a tender account of the awakening of a lost childhood passion. Praise for The Piano Shop on the Left Bank: “[Carhart’s] writing is fluid and lovely enough to lure the rustiest plunker back to the piano bench and the most jaded traveler back to Paris.” —San Francisco Chronicle “Captivating . . . [Carhart] joins the tiny company of foreigners who have written of the French as verbs. . . . What he tries to capture is not the sight of them, but what they see.” —The New York Times “Thoroughly engaging . . . In part it is a book about that most unpredictable and pleasurable of human experiences, serendipity. . . . The book is also about something more difficult to pin down, friendship and community.” —The Washington Post “Carhart writes with a sensuousness enhanced by patience and grounded by the humble acquisition of new insight into music, his childhood, and his relationship to the city of Paris.” —The New Yorker NAMED ONE OF THE BEST BOOKS OF THE YEAR BY THE WASHINGTON POST BOOK WORLD

A comprehensive exploration of 21st Century school politics, Teachers versus the Public offers the first comparison of the education policy views of both teachers and the public as a whole, and reveals a deep, broad divide between the opinions held by citizens and those who teach in the public schools. Among the findings: • Divisions between teachers and the public are wider and deeper than differences between other groups often thought to contest school policy, such as Republicans and Democrats, the young and the old, the rich and the poor, or African Americans and whites. • The teacher-public gap is widest on such issues as merit pay, teacher tenure reform, impact of teacher unions, school vouchers, charter schools, and requirements to test students annually. • Public support for school vouchers for all students, charter schools, and parent trigger laws increases sharply when people are informed of the national ranking of student performance in their local school district. • Public willingness to give local schools high marks, its readiness to support higher spending levels, and its support for teacher unions all decline when the public learns the national ranking of their local schools. • On most issues, teacher opinion does not change in response to new information nearly as much as it does for the public as a whole. In fact, the gap between

what teachers and the public think about school reform grows even wider when both teachers and the public are given more information about current school performance, current expenditure levels, and current teacher pay. The book provides the first experimental study of public and teacher opinion. Using a recently developed research strategy, the authors ask differently worded questions about the same topic to randomly chosen segments of representative groups of citizens. This approach allows them to identify the impact on public opinion of new information on issues such as *Geometry - Florida - 2020-2021 Course Workbook* World Scientific Publishing Company Wake up, America: We’re raising a nation of wimps. Hara Marano, editor-at-large and the former editor-in-chief of Psychology Today, has been watching a disturbing trend: kids are growing up to be wimps. They can’t make their own decisions, cope with anxiety, or handle difficult emotions without going off the deep end. Teens lack leadership skills. College students engage in deadly binge drinking. Graduates can’t even negotiate their own salaries without bringing mom or dad in for a consult. Why? Because hothouse parents raise teacup children—brittle and breakable, instead of strong and resilient. This crisis threatens to destroy the fabric of our society, to undermine both our democracy and economy. Without future leaders or daring innovators, where will we go? So what can be done? kids would play in the street until their mothers hailed them for supper, and unless a child was called into the principal's office, parents and teachers met only at organized conferences. Nowadays, parents are involved in every aspect of their children's lives—even going so far as using technology to monitor what their kids eat for lunch at school and accompanying their grown children on job interviews. What is going on? Hothouse parenting has hit the mainstream—with disastrous effects. Parents are going to ludicrous lengths to take the lumps and bumps out of life for their children, but the net effect of parental hyperconcern and scrutiny is to make kids more fragile. When the real world isn’t the discomfort-free zone kids are accustomed to, they break down in myriad ways. Why is it that those who want only the best for their kids wind up bringing out the worst in them? There is a mental health crisis on college campuses these days, with alarming numbers of students engaging in self-destructive behaviors like binge drinking and cutting or disconnecting through depression. A Nation of Wimpsis the first book to connect the dots between overparenting and the social crisis of the young. Psychology expert Hara Marano reveals how parental overinvolvement hinders a child's development socially, emotionally, and neurologically. Children become overreactive to stress because they were never free to discover what makes them happy in the first place. Through countless hours of painstaking research and interviews, Hara Marano focuses on the whys and how of this crisis and then turns to what we can do about it in this thought-provoking and groundbreaking book.

Before the 99% occupied Wall Street... Before the concept of social justice had impinged on the social conscience... Before the social safety net had even been conceived... By the turn of the 20th Century, the era of the robber barons, Andrew Carnegie (1835-1919) had already accumulated a staggeringly large fortune; he was one of the wealthiest people on the globe. He guaranteed his position as one of the wealthiest men ever when he sold his steel business to create the United States Steel Corporation. Following that sale, he spent his last 18 years, he gave away nearly 90% of his fortune to charities, foundations, and universities. His charitable efforts actually started far earlier. At the age of 33, he wrote a memo to himself, noting ..".The amassing of wealth is one of the worse species of idolatry. No idol more debasing than the worship of money." In 1881, he gave a library to his hometown of Dunfermline, Scotland. In 1889, he spelled out his belief that the rich should use their wealth to help enrich society, in an article called "The Gospel of Wealth" this book. Carnegie writes that the best way of dealing with wealth inequality is for the wealthy to redistribute their surplus means in a responsible and thoughtful manner, arguing that surplus wealth produces the greatest net benefit to society when it is administered carefully by the wealthy. He also argues against extravagance, irresponsible spending, or self-indulgence, instead promoting the administration of capital during one's lifetime toward the cause of reducing the stratification between the rich and poor. Though written more than a century ago, Carnegie's words still ring true today, urging a better, more equitable world through greater social consciousness.

This new report, A Nation Empowered: Evidence Trumps the Excuses Holding Back America's Brightest Students builds on the momentum of the 2004 report, A Nation Deceived: How Schools Hold Back America's Brightest Students. A Nation Deceived initiated a critical dialogue about academic acceleration, an under-used intervention. A Nation Deceived exposed to the nation the inconsistencies between research and practice and brought acceleration to prominence in the field. Volume 1 and 2 of A Nation Empowered: Evidence Trumps the Excuses Holding Back America's Brightest Students equips students, families, and educators with facts to refute biased excuses. A Nation Empowered shifts the impetus from conversation to action. Empowerment galvanizes determination with evidence. Volume 1 portrays the determination of students, educators, and parents to strive for excellence. Volume 2 reveals the evidence that trumps the excuses that hold bright students back.

This textbook covers the material for an undergraduate linear algebra course: vectors, matrices, linear transformations, computational techniques, geometric constructions, and theoretical foundations. The explanations are given in an informal conversational tone. The book also contains 100+ problems and exercises with answers and solutions. A special feature of this textbook is the prerequisites chapter that covers topics from high school math, which are necessary for learning linear algebra. The presence of this chapter makes the book suitable for beginners and the general audience-readers need not be math experts to read this book. Another unique aspect of the book are the applications chapters (Ch 7, 8, and 9) that discuss applications of linear algebra to engineering, computer science, economics, chemistry,
