In Classroom Assessment and Grading That Work, Robert J. Marzano provides an in-depth exploration of what he calls "one of the most powerful weapons in a teacher's arsenal." An effective standards-based, formative assessment program can help to dramatically enhance student achievement throughout the K-12 system, Marzano says. Drawing from his own and others' extensive research, the author provides comprehensive answers to questions such as these: \* What are the characteristics of an effective assessment program? \* How can educators use national and state

standards documents as a basis for creating a comprehensive, topic-based assessment system? \* What types of assessment items and tasks are best suited to measuring student progress in mastering information, mental procedures, and psychomotor procedures? \* Why does the traditional point system used for scoring often lead to incorrect conclusions about a student's actual knowledge? \* What types of scoring and final grading systems provide the most accurate portrayal of a student's progress along a continuum of learning? In addition to providing teachers with all the tools they need to create a better assessment system, Classroom Assessment and Grading That Work makes a compelling case for the potential of such a system to transform the culture of schools and districts, and to propel K-12 education to new levels of effectiveness and efficiency.

Greek Science in the Long Run Routledge  
Greek traditions relating to both the arts and sciences of life and health and those regarding the systematic development of theories of measurement and quantification enjoyed an incredibly long reputation and showed a kind of versatility that challenges any simplistic, dogmatic or a priori viewpoint about the meaning and social function of systematic knowledge. In this sense, they allow us to focus on very specific traits of the multiple processes of production, textual arrangement and transmission of the sciences. *Greek Science in the Long Run: Essays on the Greek Scientific Tradition* (4th c. BCE – 17th c. CE) offers a collection of essays in which renowned international experts in ancient, medieval and early modern history and culture and the history of science, together with young researchers in these same fields, reflect upon different aspects of this long-standing prominence of Greek models and traditions in the changing configuration of the sciences. The main aim of the volume is to revisit the different processes by which such doctrinal traditions originated, were transmitted and received within diverse socio-cultural contexts and frameworks. The specialized scholars and academics contributing to the volume embrace advanced standpoints regarding these issues and ensure a successful and substantial contribution to one of the lines of research that has recently attracted the most

IBM® Classification Module (Classification Module) Version 8.6 is an advanced enterprise software platform tool designed to allow organizations to automate the classification of unstructured content. By deploying the module in various areas of a business, organizations can reduce or avoid manual processes associated with subjective decision making around unstructured content. Organizations can also streamline the ingestion of that content into their business systems in order to use the information within the business systems more effectively. At the same time, the organizations can safely remove irrelevant or obsolete information and therefore utilize the storage infrastructure more efficiently. By reducing the human element in this process, Classification Module ensures accuracy and consistency and enables auditing while simultaneously driving down labor costs. This IBM Redbooks® publication explains what Classification Module does, the key concepts to understand when working with Classification Module, and its integration with other products and systems. With this book, we show you how Classification Module helps your organization to automate the classification of large volumes of unstructured content in a consistent and accurate manner. The topics that are covered include building, training, and fine-tuning the knowledge base, creating decision plans, working with Classification Workbench, and step-by-step integration with other products and solutions. This book is intended to educate both technical specialists and nontechnical personnel in how to make Classification Module work for your organizations.

how Lev Vygotsky's work can be applied to genome. Knowledge of chemistry makes it possible for us to manufacture dyes and antibiotics, metallic alloys, and other materials that contribute to the necessities and luxuries of human life. In *Transforming Matter*, noted historian Trevor H. Levere emphasizes that understanding the history of these developments helps us to appreciate the achievements of generations of chemists. Levere examines the dynamic rise of chemistry from the study of alchemy in the seventeenth century to the development of organic and inorganic chemistry in the age of government-funded research and corporate giants. In the past two centuries, he points out, the number of known elements has quadrupled. And because of synthesis, chemistry has increasingly become a science that creates much of what it studies. Throughout the book, Levere follows a number of recurring themes: theories about the elements, the need for classification, the status of chemical science, and the relationship between practice and theory. He illustrates these themes by concentrating on some of chemistry's most influential and innovative practitioners. *Transforming Matter* provides an accessible and clearly written introduction to the history of chemistry, telling the story of how the discipline has developed over the years.
